

AIR RESCUE

Heating Cooling

*Let us sanitize your HVAC system today with a natural, non-toxic cleaning process using essential oils that kill 99.9% of molds and other pathogens naturally. **

Interior Air Handler & Hard Surface Sanitizing

This is a physical cleaning of the blower assembly and internal components of the air handler in your HVAC system. The covers will be removed and all hard, porous surfaces will be cleaned by hand with our essential oil based cleaners. These systems are notorious for having organic compound growth inside due to the availability of dirt, darkness and moisture. Our cleaning process removes all visible contaminants and then continues to digest organic compounds not visible to the eye for days to come.

Sanitizing with other interior air handler repair	\$69.00
Sanitizing without interior air handler repair	\$99.00

HVAC Drain Treatment with Professional Total-C

If mold, algae growth or other debris obstruct or block the condensate drain line, the condensate pan can become filled with water and eventually overflow. The flooding that results can damage flooring, drywall and air conditioning equipment, especially if it goes unnoticed for a long time. In addition, this causes a negative effect on air quality. Total-C combines all natural citrus based liquefiers and active enzymes with natural oil eating bacteria to instantly emulsify organic compounds without the use of acids, alkalis or solvents.

Total-C Professional Drain Treatment	\$20.00

Duct Sanitizing

Fogging is an environmentally safe duct cleaning solution that kills germs in your air conditioning ducts while keeping your indoor air quality at optimal levels. We use the same natural, non-toxic product* used for the internal cleaning and aerosolize a large volume at low pressure into the entire duct system end-to-end. This will help to sanitize and disinfect the interior of the duct system and leave them fresh.

Duct Sanitizing with Thieves	\$99.00
