

The
WET PET
GAZETTE

July-August 1995

the publication of Norwalk Aquarium Society of Fairfield County
now in our 45th year!

**THE VIEW FROM
UP FRONT**

*by Anne Stone Broadmeyer
President,
Norwalk Aquarium Society*

Summer is almost over and its time to start paying attention to our fishy friends. Don't forget our 30th Annual Show is right around the corner. If you have never shown a fish, it's not too hard. We supply the 2-1/2 gallon tank, you supply the fish and the water. Make sure to bring something to cover the tank as well as a little tape to hold it in place. We now have about 100 memberships. If each member brought in two entries, we'd have a show like the good old days! Let's try.

Okay, with September just around the corner, the kids getting ready to go back to school, it looks like a busy month.

September 9th is the annual collecting trip, once again Don Maloney is heading up this adventure. (Look out for sand traps!)

September 8-10 is the Tropical Fish Society of Rhode Island's Show and Auction. This event is held in a Shopping Mall, so be sure to leave all shop-aholics at home! Seriously, this is always a fun show. Remember to support your sister societies.

I hope to see everyone at the fall meetings. There was a lot of interest for summer meetings and summer programs, but I'm wondering. Was that just to make the Board work harder or were you really interested? This will be a topic that we will be discussing. Also, we need a chairperson for the Holiday Party. Without a chair, there will be no Holiday Party. If there is enough

interest, maybe we will move the date into December ... another thought for y'all to voice an opinion on.

I wish to leave you with a few dates that the Board and I would like to see you (we need your help to make this a success) at the Nature Center:

| | | |
|--------------|----------------------|--------------------------------|
| September 28 | 6:00 PM | Show set-up |
| September 29 | 6:00 PM | Entries begin |
| September 30 | 9:00 AM | Entries begin |
| | 12:00 noon - 5:00 PM | Seminars! |
| | 6:00 PM | Judge's Dinner |
| October 1 | 10:00 AM | Auction registration |
| 12:00 noon | | Show Awards Presentation |
| 1:00 PM | | Auction Begins |
| 5:00 PM | | tear down show (we need many!) |

There is plenty to do. See you soon!

**EDITOR'S
NOTEBOOK**

*by Douglas De Ment
Norwalk Aquarium Society*

We have a couple great new articles from Pete Schaumberg and Mark Broadmeyer. We have columns from Anne Broadmeyer and Gina Bell. Thanks to all!

We need articles to keep things exciting! Get writing!

**SWIMMING
THROUGH THE
EXCHANGES**

*by Gina Bell
Norwalk Aquarium Society*

Hi, everyone!

I'd like to welcome back Gravel Gossip, the Diamond State Aquarium Society newsletter, it's been two years. Also this month, welcome to The Fish Bowl, a publication of the Chautauqua County Aquarium Association. Our last issue was April 1990! It's good to hear from you both again.

The time periods covered in this issue are: March 95.

Fish through these titles and find something to read about, please, please, please..!

Happy fishing ... I reviewed 49 bulletins.

Helpful Hints:

Cleaning Underfilters (.25)

Dave Rautio

Mr Rautio suggests placing a hose down the uplift tube and use it to start your siphon. Prior to doing this he has lowered a washer down the tube on a piece of string. As he siphons he moves the washer around aided by a magnet outside the tank. (Ed.Note: It always seems like 20% of the water is gone before I accomplish my task so I now hook up a spare eheim to suction from the tube and let it return to the tank surface until all is clear. I think the washer/magnet team will make a nice complement to speed up that process. I follow with a simple water change.)

A LOOK AT NEW PRODUCTS

*by Mark Broadmeyer
Norwalk Aquarium Society*

ALL GLASS AQUARIUM

AGA announces the 80 Gallon Long Aquarium: This new size measures 13" wide x 72" long x 20" high. AGA introduced the 120 gal 48" x 24" x 24" and the 180 gal 72" x 24" x 24" last year. These make great breeder tanks, and are great for heavily decorated saltwater aquariums.

KENT MARINE

Kent Marine has introduced Phosphate and Nitrate free freshwater buffer and pH control chemistries. The new products are called pH Stable (buffer), pH Control Plus, and pH Control Minus. Many freshwater buffers on the market contain Phosphates which undesirable algae's love.

Kent Marine has been very progressive with their line of products, both fresh and saltwater. In their freshwater line up they have: Discus Trace Elements, Freshwater Trace Elements, and Rift Lake Trace Elements. These products are formulated to provide the correct trace elements for your fishes metabolism. Trace elements are used up by the fish and should be replaced to the aquarium regularly. ZOE Freshwater vitamins can be added to your fish food or

added directly to the aquarium. Their African Cichlid Chemistry and African Cichlid Buffer when used together will provide not only the correct amount of minerals and hardness, but will allow you to target a specific pH based on the mixture. These are formulated for pH's from 8.0 to 9.0

Another item worth mentioning is R.O. Right. This product will allow you to add back the good minerals to Reverse Osmosis treated water. This will allow you to correct R.O. water for fish ranging from Discus to African Cichlids. Remember R.O. water will not sustain life as is.

Kent Marine has many other products for both fresh and saltwater and in my opinion are worthy of your consideration.

AQUARIUM PHARMACEUTICALS

Aquarium Pharmaceuticals has introduced a number of new items recently. First, is the Tap Water Purifier Deionizing Filter. This unit will provide from 50 -150 gallons of deionized water per replacement cartridge. This means no dangerous recharging chemicals. The cartridge changes color to indicate when it is exhausted. The filter and the cartridges are modestly priced and I believe this to be an excellent alternative to expensive Reverse Osmosis Filters. This filter is perfect for the saltwater hobbyist or anyone wishing to get the water under control and free of contaminants. Of course like R.O. water necessary minerals need to

be added back to the water and these are provided with the unit, along with a pH adjuster. You can then target specific water hardness and pH's.

Also introduced is the Extendable Algae Scraper. This is available in both a glass and acrylic version. The unit comes with the swivel head algae pad which is replaceable. The pad measures 2-1/2" x 9" x 3/4" thick and comes with 2 extensions measuring about 12" long, giving a total length of about 33" Long. Additional extensions are available. Aquarium Pharmaceuticals makes the best algae pad that I have ever used and I strongly suggest you try one. They make 2 sizes of hand held and a heavy duty plastic handled unit which measures about 17", all are available in glass or acrylic versions. I want to personally thank Aquarium Pharmaceuticals for thinking about those of us that have to handle monster tanks.

Also introduced is their Amazon Extract (a blackwater tonic) great for Discus, Tetras, and Angelfish. This product recreates the blackwater conditions found in tropical rivers, lakes, and streams. Blackwater tonics reduce stress, stimulate coloration, and aid in breeding.

AMIRACLE

Amiracle has introduced two new lines of filtration units. First up is the Berlin Series. This filter unit consists of a sump where water from the tank is released into a chamber containing a venturi type protein

skimmer. After skimming the water for proteins and excess organics it is released to the next chamber where in will be run through a chemical reactor and a denitrator chamber. The water is then returned to the aquarium. This series of filters is available in three sizes the BFS for up to 75 gallons, the BFM for up to 150 gallons, and the BFL for up to 300 gallons. The Berlin method of filtration is for Reef Tank Aquariums utilizing Live Rock for nitrification of ammonia.

The other series is called the Pro-Line Series, also available in three sizes: the PL-1000 for up to 75 gallons, the PL-2000 for up to 150 gallons, and the PL-3000 for up to 300 gallons. This filter runs under the principle that water should be protein skimmed prior to nitrification. this makes the protein skimmer much more effective since the nitrification process produces by-products which can not be skimmed effectively. This method also will lower the volume of organics that the nitrifying bacteria need to oxidize.

All these filters are sump type under the tank design and include an overflow conversion box for tanks which are not drilled. Simple yet effective designs. Thumbs up to Amiracle.

WARDLEYS

Wardleys recently announced its new line of test kits. They include the Wardley pH junior test kit with liquid reagent. The

Wardley pH professional water test lab which contains a mid range pH liquid reagent, Reduce pH liquid, Raise pH powder and their unique acid/base demand test which will tell you how much Reduce or Raise to add. This test eliminates the guess work of adjusting pH. The last pH kit is the High Range pH Test kit, also a liquid reagent.

There are two Ammonia test kits. The Junior Ammonia Kit is a liquid reagent test for freshwater and the Professional Ammonia kit is a three part liquid kit for fresh and saltwater.

The last two kits are the Nitrite and the Nitrate Professional test kits which are tablet based.

All the kits above come with the test vial and a clear label which can adhere to your tank for recording your results and the date. All these kits accurately match the color charts unlike the their old pH Junior and Senior test kits. These new kits are easy to use and a welcome addition to my water testing lab. I highly recommend that you give all these Wardley test kits a try.

LOOKING AT SOME FISH

Pete Schaumburg
Norwalk Aquarium Society

Howdy, fellow fish-heads! It's Dr. Pete again, this time with a look at a few of my favorite fish for that "fish only" tank. Nothing real scientific here, my finny friends, just some observations and a little bit of factual data to help fill in the gaps and possibly, if you have the means, get you to try keeping these guys for yourself.

O.K., I'll admit it. I've got Pufferotis Triggeritis. This rare disease has strange symptoms, ranging from an odd, overwhelming compulsion to buy or build larger and larger aquariums, to having an urgent desire to purchase every kind of pufferfish and triggerfish listed in Burgess' Atlas.

The derivation of Pufferotis Triggeritis roots from "Puffer", a big fish that can self-inflate, and "otitis", which doesn't mean anything. And I believe that "Triggeritis" comes from "triggerfish", a fish that will eat anything and never likes the way the tank is decorated, and "itis", which in Greek doesn't mean anything either.

I have several pufferfish, Floyd being the largest. Floyd has been with us for many years now, I've lost count how many, but I

think it's close to five, and has increased in size to the point that I am currently building a 240 gallon tank for him since he has outgrown his current 135. Floyd is an Arothron Meleagris, and you can see a good picture of him in Burgess' Atlas, page 646 in the top right corner. He is all black with a lot of white spots throughout his body (no, it's not ich!) and has large, graceful fins. He has been a very hardy fish, he is not so much an "active swimmer" as he doesn't seem to be in any rush to do anything, except for feeding time when he gets rather demanding. He lazily cruises around most of the time, and will occasionally balance himself on a rock or even lay down on the bottom of the tank and take a nap (yes, fish DO sleep). The only time I've ever seen a sign of aggression towards another tank mate was when I attempted to introduce a Dogface Puffer (Arothron Nigropunctatus) into the same tank. Floyd did not approve of this, and immediately attacked the poor fellow, and while no damage was done and the new guy (his name is Puff, go figure!) was put in another tank, it was enough of a demonstration on Floyd's part to make me very wary of placing two Arothrons in the same tank. An interesting note here is that body coloration and size were very different between the two. Floyd is now over a foot in length, and Puff is a tad over seven inches. However, Puff is now (and has been for over two years) in the company of another puffer, a Diodon Holocanthus (spiney puffer, and his name is Squirt, as he likes to squirt water out the tank at you when you feed him). So, one could reasonably presume that puffers of

different families may be kept together quietly, but not puffers of the same.

I feed Floyd a varied diet, consisting of cherrystone clams (his favorite), fresh jumbo shrimp, octopus, squid, cod, swordfish, king crab legs, live local crab (a rare treat for him, and a rather impressive display of his hunting ability) and smelt. He consumes about two whole cherrystone clams a day, so this will give you an indication of how much puffers require for food intake. Quite frankly, he eats better than I do!

Puffer temperament in general is excellent. They don't spook at every little movement, to the contrary they have the curiosity of a cat. They also recognize people, even if they don't feed them all the time! I've had to move my tank on occasion (gotta make room for another tank, you know!) and Floyd now lets either my wife or I pick him up in our hand to place him in a large barrel. This developed as a result of having a large net, but not large enough to hold him without curling his tail fin around. If you've ever "patted" a fish before, it's a unique experience. I expected a fairly rough surface, but found Floyd to feel like wet, warm, soft velour. He doesn't flop around, and actually seems to enjoy the attention, even when being moved into and out of the barrel.

We see Floyd, and all our puffers, inflate themselves once in a while, and while it's known that this is a defense measure, I've come to believe that this is not the only reason. Observation has shown that if we don't vary the diet, they will sometimes become constipated, and this form of self-

inflation seems to help "get things moving". They also seem to do it sometimes as a stretching exercise. So, I feel that this unique ability of the puffer is not just for defense.

The "intelligence" of puffers is high in my opinion, Floyd knows where his food is kept (freezer). Whenever we open the fridge, he will swim to that end of the tank (he can see it from the tank's location) hover near the top of the water and splash with his fins. As you can imagine from his size, he can make a pretty big splash. And if we close the fridge without bringing him something, he'll follow us back across the tank and splash until we give in. Note that he doesn't splash all the time, just when the refrigerator is open!

I highly recommend any puffer, they are hardy, tolerant of water chemistry and very personable. They do require a lot of food, and flake food or frozen just doesn't cut it with these guys. If you want to try one out, give me a call and I'll tell you more about my favorite fish, the Puffer!

EDITOR'S ADDENDUM

by Douglas De Ment

March 2001 - I have reformatted this issue for upload to our web site, www.norwalkas.org

If you like getting this, let me know, I will reformat other issues. djdement@aol.com

REGULAR MEETINGS

There are regular meetings on the third Thursday of each month except December starting at 8:00 PM at the Nature Center for Environmental Activities, 10 Woodside Lane, Westport. Meetings are open to members and the public. Each meeting includes a short business meeting, a raffle, an auction, and a program/event.

OFFICERS, DIRECTORS, AND CHAIRPERSONS

N.A.S. is not-for-profit club that is managed by officers and directors elected from the membership in our November meeting. Different events during the year often have a special chairperson. All of these people are volunteers, and nobody receives any monetary compensation for their N.A.S. efforts. Be kind to us! (This is a hobby, it is supposed to be fun!)

WET PET GAZETTE EXCHANGES

N.A.S. gladly exchanges its publication with other societies that send their publication to us. We publish nine issues a year (we do not publish in August, December, and January) and we send our exchange copies as bulk mail in March, June, and November. Unless noted by copyright, our articles & artwork may be reprinted by a not-for-profit aquarium society by acknowledging the source and sending us two copies (one for the author)

EDITORIAL POLICY

The views expressed in the articles are those of the author(s), and do not necessarily agree with the views of the Editorial Staff. If you don't agree with the views in an article, we invite you to submit an article of your own. The Editorial Staff will not reject an article because it conflicts with their opinion or experiences. However we reserve the right to reject what we consider to be negative articles.
