

Introducing the Texible Wisbi

TEXIBLE Wisbi is an innovative sensor system that detects bed exits and body fluids such as urine, blood, vomit or feces.

When a person is leaving the bed or body fluids come into contact with the sensor textile, the sensor sends a signal to a call system. TEXIBLE Wisbi is very easy to use and washable. The sensor textile is used both as a bed insert and as modified versions in various nursing care areas.

Prompt alarms support the nursing staff in their daily work while simultaneously improving patients' safety and well-being.

Wisbi Features:

Intelligent alarms

Reduced nursing care effort thanks to automatic alarms when wetness or bed exit are detected

Easy handling

Simple connection with an existing call system or a socket outlet receiver

Waterproof

Protects the mattress and sheet from moisture and reduces the need to change the bed linen

Maximum lying comfort

Very comfortable lying position thanks to a double roughened cotton flannel

Breathable

Minimal perspiration thanks to a multi-layer composition and a breathable membrane

3 x thinner

Thinnest washable incontinence bed insert – 3 x thinner than comparable pads

Non-slip

Thanks to a special functional fabric on the underside, the bed insert doesn't slip

Highest washing resistance

Washable at 95°C. The bed insert can be cleaned like all common bed linens

Wisbi solutions include:

- * Wisbi Plus (bed exit and incontinence)
- * Wisbi Home
- * Wisbi Dialysis
- * Wisbi Wheelchair
- * Wisbi Kids

HOW DOES TEXIBLE Wisbi® WORK?

TEXIBLE Wisbi can be easily integrated into existing call systems. If there is no call system, TEXIBLE Wisbi works with an Eldat socket outlet receiver; it triggers the alarm via radio. The socket outlet receiver can be installed in any room at a distance of up to 30 metres from the transmitter.
