INTRODUCTION

DALMATIAN Invento[™] is widely used in the process of rehabilitation. It is recommended for not only children but also young people. It is used as a rehabilitation chair during adopting the sitting position and then as a static standing frame in the further process of rehabilitation. Besides, it can be a lying function during the whole process. This device is equipped with the gas spring thanks to which both therapists and care takers can put the child in upright position without removing him from the chair. This multifunctional device completes the process of rehabilitation due to adjustment and equipment. Upright standing may be performed from 0 to 90 degrees. Moreover, safety vest and pelvic belt are equipped with innovative "hold & pull"© system which allows for quick and precise stabilization of the child in the device. As far as this product is concerned, it is created from ecologic materials and it is hand painted.

Remember to read this user manual carefully. You will find not only useful information but also guidelines regarding safe and effective use of the product.

If you have any questions or remarks, do not hesitate to contact with us: **Medical consultant:** mobile +48 508 382 509 **Akces-MED Sp. z o.o.:** ph. +48 17 864 04 77 **e-mail:** export@akces-med.com

Thank you for purchasing our product!

CAUTION! Before using the product, user is obliged to familiarize himself/herself with user manual. Remember that complying with guidelines is highly important. It assures safety and extends durability as well as aesthetics of the

1 THE PURPOSE OF USER

Trie present user manual contains basic information which is essential for proper usage, preparation, maintenance, cleaning and guarantee conditions regarding **DALMATIAN INVENTO™** multifunctional stander.

User manual should be kept in easily accessible place. It is designed for people who look after disabled children, and for both doctors as well as physiotherapists who operate the device.

CAUTION! Before using the product, user is obliged to familiarize himself/herself with user manual.

Remember that complying with guidelines is highly important. It assures safety and extends durability as well as aesthetics of the device.

2 INDICATIONS FOR USE

It is recommended for children in the following cases:

- Cerebral palsy various types and forms.
- Brain and spinal cord injuries with lower limbs paralysis and weakness, balance and motor coordination disorders with different etiology.
- Demyelinating disease (e.g. multiple sclerosis SM).
- Meningocele.
- Muscles diseases with weakness and paralysis (dystrophy, myasthenia gravis, myositis).
- Genetic disorders.
- Degeneration and neurological diseases.
- Other condition connected with muscles weakness, paralysis and musculoskeletal disorders.
- After head and spinal cord injuries and spine trauma with paralysis and paresis.

3 GENERAL CHARACTERISTICS OF STANDER

5 DESRIPTION HOW TO USE MULTIFUNCTIONAL STANDER

I. POSITIONING CHAIR

5.1 The adjustment of seat

Please follow these steps so as to adjust the depth of seat:

- loosen 4 fastening knobs situated under the seat,
- adjust the depth of seat at your discretion,
- tighten knobs.

Please follow these steps so as to adjust the tilt angle of seat:

- press pedal situated at the back of chair and at the same time adjust the tilt angle of seat at your discretion,
- block seat, release pedal.

It is always better to adjust it when patient is placed in the device because his/her weight makes it easier to cope with spring force, otherwise you need to use more strength.

5.2 The adjustment of backrest's tilt angle

Please follow these steps so as to adjust the tilt angle of backrest:

- loosen fastening knobs,
- adjust the tilt angle of backrest at your discretion,
- tighten firmly fastening knobs.

5.3 The adjustment of trunk pelottes

Please follow these steps so as to adjust trunk pelottes:

- loosen 4 fastening knobs,
- adjust the width and the height of pelottes in compliance with patient's measurements,
- tighten knobs.

AKCESMED

5.4 The adjustment of feet support

a) Please follow these steps so as to adjust the height of footers:

- loosen fastening knobs,
- adjust the height of footer at your discretion,
- tighten knobs.

b) Please follow these steps so as to adjust the tilt angle of footrest:

- loosen fastening knobs situated at the side of each footrest
- adjust the tilt angle at your discretion
- tighten knobs

5.4.1. How to adjust new generation footrest tilt angle

- Pull the lock pin on the footrest and adjust needed tilt angle
- Release the lock pin when the needed footrest position have been set up

AKCESMED

5.5 Abduction block with knee support

- a) Please follow these steps so as to adjust abduction block:
 - loosen fastening knob,
 - move abduction block either forwards or backwards,
 - tighten knob.
- a) Please follow these steps so as to mount knee support
 - unscrew significantly fastening knob situated at the front of abduction block,
 - insert knee support,
 - tighten fastening knob.

b) Please follow these steps so as to adjust knee stabilizing pelottes

- loosen knobs fastenings knee pelottes,
- adjust the distance of pelottes at your discretion,
- tighten fastening knobs.

CAUTION! If vest and pelvic belt are mounted, it is

- necessary to make sure that
- buckles do not unfasten under pressure
- buckles do not shift due to incorrect assembly

5.6 The adjustment of headrest

a) Please follow these steps so as to adjust headrest:

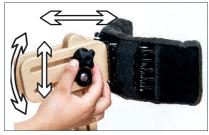

- loosen fastening knobs situated at both sides of headrest,
- adjust headrest,
- tighten firmly fastening knobs.

b) Next, it is important to:

- loosen screws from headrest's ribbing with the aid of Allen key,
- adjust the shape of headrest at your discretion,
- tighten firmly screws.

HexagonPro© Headrest

The headrest may be adjusted with Allen key. You can also change the width of the headrest. After adjustment, there is necessary to screw all of screws and bolts tightly!

export@akces-med.com

CAUTION! Shin cannot be squeezed by seat or any other elements of seat.

5.7 Assembly and adjustment of vest

Please follow these steps so as to mount vest:

- fasten 4 fastening buckles,
- pull cotters so as to adjust the vest at your discretion.

CAUTION! Before using the vest, it is essential to familiarize yourself with the safety rules contained in the instruction. Information on how to safely use the VEST can be found on the page 29 of the instruction. Improper use and not obeying the safety rules may endanger the user's health and life

5.8 Assembly and adjustment of pelvic belt

Please follow these steps so as to mount pelvic belt:

- · fasten two fastening buckles,
- pull cotters so as to adjust the length of belt at your discretion

C DALMATIAN INVENTO™

5.9 Assembly and adjustment of tray

Please follow these steps so as to mount tray:

- · loosen fastening knobs situated under tray's top,
- adjust upper limb support at the same height,
- place tray on upper limb support,
- tighten fastening knobs.

5.10 The adjustment of upper limb support

Please follow these steps so as to adjust the height of upper limb support:

- loosen two fastening knobs that bolt batten with upper limb support,
- adjust the height and tilt angle of upper limb support at your discretion,
- tighten fastening knobs.

🕾 +48 17 864 04 77

Please follow these steps so as to adjust the tilt angle of upper part of upper limb support

- loosen fastening knob,
- adjust the tilt angle at your discretion,
- tighten fastening knobs.

II. LYING FUNCTION

If you wish to adjust chair to lying position it is necessary to adjust two footrest and backrest horizontally. Points 5.2 and 5.4b clearly show how footrest and backrest should be adjusted.

CAUTION! When configuring the device for the lying function, the depth of the seat should be put down to a minimum!

Knee support in lying position

a) Knee support in lying position is mounted on upper part of abduction block;

b)Adjust the height of knee support with the aid of knob situated at the front of abduction block;

c) It is possible to adjust standing frame. Please follow steps described in point 5.5 (Look point 5.5, Knee support, page 13).

III STANDING FRAME

Please prepare the device for lying function if you want to move on to upright standing. This process is described on page 17 (Look point II LYING FUNCTION, page 17).

CAUTION! When configuring the device for the upright function, the depth of the seat should be put down to a minimum! Otherwise, during the upright position the feet of the footrest can catch on the ground.

Mount knee support and move on to upright standing once all elements are prepared and adjusted to the patient. Unblock safety mandrel, press pedal (a) and place the patient in a proper position (b).

CAUTION! It is important to make sure that both vest and pelvic belt are correctly fastened and adjusted before upright standing. Furthermore, check if knee support is properly mounted and , moreover, make sure that knee support protects legs from bending.

CAUTION! Please always make sure that patient's body parts are not placed between movable elements from the device, otherwise patient will hurt.

6 ADDITIONAL EQUIPMENT

6.1 Footers with adjustment

Please follow these steps so as to mount footers with adjustment:

- · dismantle standard footers,
- mount footers with adjustment; mount them in a places where standard footers were mounted,
- adjust footers at your discretion,
- tighten fastening knobs.

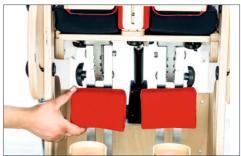

6.2 Cushions for upper limbs support

Please follow these steps so as to mount cushions for upper limbs support:

- unscrew fastening knobs from each cushion,
- put cushions on footrest's profiles,
- adjust the height at your discretion,
- tighten fastening knobs.

www.akces-med.com

🕾 +48 17 864 04 77

export@akces-med.com

6.3 Independent adjustable side pelottes

Independent adjustable side pelottes are mounted by manufacturer. Please follow these steps so as to adjust them:

- measure patient,
- loosen fastening knobs,
- adjust the distance,
- move pelottes either upwards or backwards so as to adjust them to the patient,
- tighten knobs if height is adjusted.

6.4 Adjustment of thigh abduction belts

Thigh abduction belts are mounted by manufacturer. Please follow these steps so as to adjust them:

- adjust their length at your discretion,
- fasten buckles.

CAUTION! If vest and pelvic belt are mounted, it is necessary to make sure that

- buckles do not unfasten under pressure
- buckles do not shift due to incorrect assembly

DALMATIAN INVENTOTM

6.5 Head stabilizing belt

In order to assemble head supporting belt, there is necessary to:

- attach Velcro to the both sides of the headrest (fig. 39)
- adjust the length of the belt according the patient's needs
- fasten the strap in front of the headrest •
- check the correctness of the assembly by pulling the strap. •

6.6 Soft cover for tray

Please follow these steps so as to mount soft cover for tray:

- Adhere 5 adhesive Velcro tapes;
- Put soft cover in a way that its edges cover tray edges.

6.7 H harness

Please look at point 6.6 so as to find out how to assembly vest. (**point 5.6**, **page 13**). Initially, patient should not adjust vest tightly. Once vest is put on, it should be fastened with the aid of belts with plastic straps. Vest can be quickly unfastened.

CAUTION! Before using the vest, it is essential to familiarize yourself with the safety rules contained in the instruction. Information on how to safely use the VEST can be found on the page 29 of the instruction. Improper use and not obeying the safety rules may endanger the user's health and life

6.8 Tray for manual therapy

Tray for manual therapy is mounted instead of standard tray **(look point 5.9, page 15).**

6.9 6 points harness

In order to mount 6 points vest it is necessary to:

• points vest should be put on and then it is important to fasten zipper and buckle at the front of vest;

- Adjust vest with the aid of Velcro tapes situated at the back of vest.
- 6 points vest should be fastened in a place that is created for standard vest (point 5.6, page 14). So as to fasten it, use not only buckles but also fastening belt that should be threaded behind chair's backrest and fastened at the front of vest.

CAUTION! Before using the vest, it is essential to familiarize yourself with the safety rules contained in the instruction. Information on how to safely use the VEST can be found on the page 29 of the instruction. Improper use and not obeying the safety rules may endanger the user's health and life

THE USE OF MULTIFUNCTIONAL STANDER

CAUTION! DALMATIAN INVENTO[™] multifunctional stander has to be used with compliance to guidelines included in this user manual. Remember to use the product only with someone who is trained and knowledgeable. Do not forget to prepare both product as well as patient before using **DALMATIAN INVENTO**[™] multifunctional stander!

7.1. Preparation of the patient

Before using the product, it is essential to make sure that:

- patient's outfit is light and comfortable sporty clothes are advisable,
- shoes should be comfortable and, moreover, they should stabilize ankle,
- due to hygienic reason and to avoid abrasion it is advisable for the patient to always wear clothes when using the device, skin must not be naked especially in places of regular contact with upholstery,
- drains, bags, catheters etc. if applied, have to be secured to function properly and not to disturb during using the product,
- if it is necessary for a patient to wear orthopedic supply (collar, corset, orthesis, shoes) if it is recommended by doctor.

CAUTION! Outfit should protect patient's skin from direct contact with upholstery as well as other parts of equipment.

CAUTION! Only doctor can make a decision concerning using any kind of orthopedic supply!

7.2. How to use multifunctional stander

- 1. Before use it is necessary to:
 - Unfold the device;
 - · Place the device on even ground;
 - · Make sure that all parts are serviceable, correctly mounted and stable;
 - Block brakes;
 - · Adjust the device to patient's measurements;
 - · Undo vest, trunk belts etc so as to place easily the patient is the device
 - Place patient in the device;
 - Fasten all elements which stabilize patient e.g. vest, trunk belts, feet stabilizing belts etc.;
 - Mount additional equipment e.g. tray.
- 2. In case of patients who have problem with bladder, it is necessary to put special cloth on seat. This cloth can be purchased in pharmacy or medical shops.

CAUTION! Before the product is used, it is highly necessary to make sure that all belts as well as safety equipment are correctly fastened as well as adjusted. What is more, check if they do not become undone due to the pressure and, moreover, make sure that clampings from adjustable elements are firmly tightened!

Equipment works correctly only when the device is adjusted according to patient's height as well as weight. Remember to take all these measurements into account while purchasing the product. Correct adjustment is the most important due to the fact that only then the product is safe. It is forbidden to force child to keep specific position because he/she will feel uncomfortable and it may lead to wrong posture.

7.3. Upright position

CAUTION!

The length of time for upright position process is different for each patient. It is recommended to extend this time during the initial period (adaption period for the change of position). Either doctor or physiotherapist can make decision concerning the length of upright position process. Upright position process has to be always performed under the supervision of trained person!

It is recommended to divert patient's attention during upright position process by:

- manipulation games
- educational games
- touch stimulation and others

CAUTION! It is highly important to adjust the device to the patient before using it!

CAUTION! Make sure that all belts as well as fastenings from adjustable elements are correctly adjusted and fastened.

CAUTION! It is forbidden to leave the patient unattended!

CAUTION! Only trained staff can adjust standing frame to the patient!

CAUTION! As far as first upright standing is concerned, it takes place in rehabilitation, neurosurgery or orthopedics wards. Moreover, it has to be performed together with doctor and physiotherapist due to the fact that medical problems may appear during first treatments such as fainting, drop in blood pressure, dizziness etc. Upright standing is continued in home together with trained staff (rehabilitation technician, district nurse, trained family members).

CAUTION! Incorrect adjustment of the device can lead to side effects such as: fainting, body deformities, overloading joints. It is highly advisable to adjust the device before every use of a standing frame. This adjustment has to be done only by a trained person or therapist. If any of these side effects appear, it is highly important to stop the upright position process, take out the patient from the device and lie him/her down. If these undesirable side-effects still occur it is necessary to contact doctor. If these side effects disappeared, remember to inform doctor so as to make decision concerning further upright position process.

7.1. How to use vest

CAUTION! The vest provides posture support for wheelchair users as well as patients sitting in positioning chairs or other rehabilitation seats. When properly used, the vest allows the patient to adopt the correct sitting position for a longer period of time. The design and shape of the vest make it possible for the patient to be free to move their upper limbs within the constraints of the patient. **If the vest is not used properly, it can pose a serious threat to the health and life of the patient!**

Possible threats incident to the use of the vest:

- 1) If the lower vest straps are fastened too loosely, there is a risk that the vest will move upwards to the patient's neck, making it difficult to breathe always check the tension of the straps and set them in such a way that the lower edge of the vest is located near the lower abdomen of the patient.
- 2) In a situation when the patient slips off the seat, the upper edge of the vest cover's the patient's neck and blocks the trachea, making it difficult to breathe it is therefore necessary to ALWAYS use the accessories stabilizing the patient's pelvis, such as a pelvic belt, thigh abduction belts or an abduction block.
- 3) There is a risk that the upper straps of the vest will press the patient's neck, blocking the trachea and making it difficult to breathe. This might happen if the patient's body is improperly secured in the seat or stroller it is then necessary to use the optional accessories of these devices and stabilize the patient's body using the lateral supports. If there is no possibility to use such accessories with the device and the patient's body cannot be properly stabilized, the device should be replaced with the one having such an option.
- 4) The vest is fastened too tightly to the backrest and as a result the patient cannot breathe easily – in this case the vest should be loosened in such a way that it is possible for the caregiver to insert a straightened hand between the vest and the patient's body. If, however, we want to stabilize the patient's body properly, we should use a dynamic orthopedic vest, e.g. a Flex-point vest, which does not cause the breathing difficulty for the patient.

Instructions for the proper use of the vest:

1) Make sure that the patient is sitting in the best possible position:

- in the middle of the seat,
- deeply in the seat in such a way that the patient's lumbar spine rests against the backrest.
- 2) Secure the patient's pelvis with, for example, a pelvic belt, thigh abduction belts or an abduction block.
- 3) Make sure that the side supports of the device, if used, are set in the correct position. It is required that the patients with the poor trunk control use the side supports. The side supports limit the lateral movements of the patient's body, which could lead to the compression of the vest straps on the neck of the patient.
 4) Secure the vest:
 - fasten and adjust the lower straps of the vest, so that the lower edge of the vest is located near the lower abdomen of the patient,
 - fasten the horizontal strap of the vest (if present),
 - fasten the shoulder straps of the vest,
 - check if the buckles of the vest do not open under pressure.

5) Check the patient's position:

- make sure that the vest cannot move by itself towards the patient's neck,
- make sure that you can insert a straightened hand between the vest and the patient's body.

To prevent injuries and to minimize the risks associated with the use of the vest, the following rules should be followed:

- 1) The position of the vest MUST be checked each time after putting the patient in the seat.
- 2) Special attention should be paid to protecting the patient from falling forward, slipping off the seat or lifting the pelvis. The vest MUST be used with the accessories which will secure the patient's pelvis at all times (e.g. the pelvic belt, thigh abduction belts or the abduction block). The use of the vest cannot be considered separately but as a part of a general posture support system including supports such as pelvic belts, foot support, torso stabilization, thigh abduction belts, tilt-in-space position and reclining backrest.
- 3) Special attention should be paid to ensuring that the entire foot of the patient has stable support. If the device is not equipped with a foot support, the patient's feet must rest firmly against the ground.

C DALMATIAN INVENTO™

- 4) It should be remembered that any change of the inclination angle of the backrest, seat, foot support or tilt-in-space function might affect the effectiveness of the belts and supports!
- 5) Special attention should be paid to the use of stabilization elements or side supports. If the patient has poor trunk control, the side supports will limit the lateral movements, which could lead to the compression of the vest straps on the neck of the patient.
- 6) The mounting of the vest and adjusting it to the patient can only be carried out by a suitably trained person, who is familiar with the instructions for the use of the vest and the rules of its safe use.
- 7) Do not make any repairs or modifications to the vest on your own. In order to repair or replace any part of the vest, please contact the manufacturer.
- 8) Do not use a damaged or incomplete vest, as this poses a serious threat to the health and life of the patient!
- 9) Do not leave the patient in the device unattended!
- 10) The correctness of the use of the vest should be particularly controlled in accordance with the recommendations in case of children, patients with impaired memory or mentally ill.
- 11) Make sure that all people taking care of the patient are familiar with the rules of the safe use of the vest.

How to care for the vest:

The vest works effectively only if kept clean and maintained in accordance with the manufacturer's instructions. Before each use of the vest, check whether:

- 1) The vest straps are not frayed or worn. If so, have them exchanged for new ones,
- 2) The vest straps are not attached to the wheels of the device,
- 3) The buckles are not damaged. If so, have them exchanged for new ones,
- 4) The Velcro fastening holds firmly. If not, remove any dirt or hair from the Velcro, or have it replaced with a new one,
- 5) There have been no changes in the patient's height or weight from the moment the vest was adjusted to the patient,
- 6) The shoulder straps of the vest are adjusted so that they are not too loose or too tight,
- 7) The vest should be cleaned regularly with the use of warm soapy water and dried out of the direct sunlight and other sources of heat. The vest must always be dry before usage.

If you have any doubts or questions about the use of the vest, please contact your doctor or physiotherapist.

8 SAFETY RULES

CAUTION! DALMATIAN INVENTO™ multifunctional stander has to be used in compliance with guidelines in this user manual.

It is highly important to consult either doctor or physiotherapist in order to make right decision concerning the choice of **DALMATIAN INVENTO™** and its size. It is also essential to familiarize with the guidelines described in user manual before using the device.

- 1. Before use it is necessary to:
 - make sure that there are no damages or different faults which could endanger patient's life; check if all parts are working and are correctly mounted and, moreover, check if they are not broken;
 - check if all screws, knobs and all glued, sewed or tapped parts are tightened;
 - · check if brakes are operating correctly;
 - · check if buckles are operating correctly;
 - · sprawdzić prawidłowość działanie sprzączek;
 - · always use safety belts, Velcro tapes should overlap min. 8cm;
 - adjust the device according to patient's measurements and needs e.g. the adjustment of pelottes , footplate etc.;
 - make sure that all movable parts and knobs for adjustments are stable and locked;
 - secure patient with the aid of elements such as vest, foot stabilizing belts, pelottes, abduction block, headrest. It is highly important to secure patient because it safeguards him/her from falling out. If abduction contracture occurs, it is recommended to use abduction block in order to prevent ulcers between knees;
- 2. It is forbidden to use the device for different purposes that it is intended to.
- 3. It is forbidden to use the device when it is damaged or any part is missing.
- 4.It is forbidden to leave the patient unattended.
- 5. The device should be used only when there is someone who is trained and knowledgeable.

DALMATIAN INVENTO

- 6. It is forbidden to leave the device and the patient on unstable ground unattended, even if the brake is engaged.
- 7. It is forbidden to either go up or down the stairs; it doesn't matter if the patient is placed in the device or not.
- 8. It is important to engage brake during getting into and getting out the device.
- 9. It's important to make sure that patient doesn't stand on footer during either getting into or getting out the chair.
- 10. Make sure that all limbs are not close to spokes or other adjustable elements.
- 11.Although the device and the upholstery are made of fire-resistant materials, please pay your attention when approaching to sources of fire or sources of high temperature during using the device. Moreover, chair shouldn't be stored in rooms with high humidity.

9 MAINTENANCE AND CLEANING

DALMATIAN INVENTO[™] should be kept clean and used in compliance with the manufacturer's recommendations. The device should be kept in clean, dry and ventilated room. Maintenance as well as cleaning have to be performed at least once a month. Regular cleaning and maintenance of device are indispensable to maintain its correct functionality as well as safety.

It is highly advisable to remember about proper maintenance in order to extend product's aesthetics. So as to do that, it is essential to comply with these guidelines:

- It is recommended to clean upholstery with the aid of cleaning product, soft sponge and warm water. If you use sponge which is too wet, stain may get bigger, upholstery may be destroyed. It is necessary to remember that the excess of dampness should be removed from fabric before next cleaning. Please rinse upholstery with warm water and clean white cloth once stain is removed.
- 2. It is forbidden to soak upholstery!
- 3. It is forbidden to clean upholstery with the aid of hard brushes.
- 4. It is forbidden to clean upholstery with strong chemical agents such as solvent or caustic chemicals.

CAUTION! Akces-MED. Sp z o. o takes no responsibility for damages caused by use of wrong clearing agent.

- 5. It is forbidden to soak upholstery during cleaning. Remember that upholstery has to be always dry before using.
- 6. It is forbidden to clean, make any changes and maintain stroller during using it.
- 7. All metal as well as plastic elements should be cleaned by hand with the aid of general cleaning products. Remember to familiarize yourself with cleaning

35

CAUTION! Remember that upholstery has to be always dry before using!

Before using it is necessary to:

- clean wheels;
- check if base as well as wheels are correctly mounted; check if brake stops turning wheel;
- make sure that all wooden parts e.g. tray don't have splinters;
- check if stroller construction is free of breaks or any kinds of deformities;
- check if all movable parts are working and all screws, nuts, knobs etc. are correctly tightened;
- check if belts, vests, trunk belts, feet stabilizing belts etc are not frayed; check if buckles and clamps work correctly.

CAUTION! Manufacturer takes responsibility only for hidden faults or damages which appeared despite the fact that user complied with the guidelines.

CAUTION! In case of any damages, it is essential to contact the person who sold you the product.
