CLINICAL SKIN ENHANCEMENTS

Clinical enhancements are “working facials.” They are more structured and goal oriented than our “relaxing” treatments and may include cleansing, exfoliation, enzymes or peels, extractions, custom mask and the selected procedure.

CHEMICAL PEELS:

Peels remedy skin aging, pores, acne, hyperpigmentation, dry skin, melasma, smoker’s skin, blackheads and fine lines. The skin texture is refined; your complexion will become clearer and brighter giving you a younger, soft, fresh look.

**Light to Medium Peels:**  
Also known as Salicylic, Lactic Acid or Vitamin A, these peels remove the outer layer of skin so that a new, smooth layer of skin is revealed. This action stimulates the production of elastin and collagen essential to healthy, youthful skin. A light chemical peel is left on your skin for a short amount of time. Shedding, flaking and redness after peel may occur.
