Ant Invasion - Get Ready

As per many experts, since September 2023, there has been a huge increase in ant activity. This is not only in the Western Cape, but in all parts of the country. Experts say that the extreme hot weather are contributing to the increase in ant population. In these conditions, the breeding times have shortened and ants can multiply in matter of days. With the ants excellent sense in weather patterns, especially before heavy winter, they will start collecting and storing food at an increased pace.

Need help with your ant problems, we are here to help.
