

CAPABILITY STATEMENT

IT Consulting | Digital Transformation | Management Consulting | Healthcare IT

Aksum Consulting, Inc. provides expert consultancy and support services to commercial customers and federal and state governments. We offer broad and deep industry experience and expertise in our core capabilities and a network of industry-leading partners. We are nimble, responsive, and adaptable; we provide unsurpassed value through customer-focused engagements that deliver practical, extensible, and cost-effective solutions.

CORE CAPABILITIES

IT CONSULTING

We engage our clients as primary solution partners in analysis, design, planning, and execution to enable successful integration of business strategy and information technology (IT) objectives in achieving organizational goals. Our IT consulting services include:

- Data engineering
- Systems engineering
- Agile systems development
- Lean enterprise architecture (EA)
- IT modernization

DIGITAL TRANSFORMATION

We analyze, engineer, model, automate, and optimize internal and customer-facing processes to help our customers gain end-to-end visibility across mission-critical business systems, drive operational efficiency, enhance business process quality, increase ROI, and facilitate interoperability. Our digital transformation services include:

- Service architecture and design
- Digital process automation
 - Process mining, analysis, and reengineering
 - Data modernization
 - Application rationalization and cost optimization
 - Continuous process improvement
- Technology evaluation, selection, and integration
- Organizational change management

MANAGEMENT CONSULTING

By applying industry best practices, we help our clients implement value-added management and governance processes, achieve business-IT alignment, and gain valuable operational insight. Our management consulting services include:

- Technical program and project management
- IT governance and strategic planning
- IT service management

HEALTHCARE IT

Our team brings insightful healthcare IT experience in the areas of operational analyses; adoption, implementation, and rollout of electronic health records (EHR) systems; workflow optimization; and clinical documentation initiatives. Our healthcare IT services also include:

- Change management related to EHR adoption
- Process improvement and quality assurance
- Healthcare data integration and interoperability
