

CareFlex

FORTUNA[®]

MOBILITY

advice • choice • service

The SmartSeatPro[™] Paediatric from CareFlex is a highly adjustable, modular seating system for children and young adults with complex postural and pressure management needs. There is nothing else quite like it.

The flexibility offered by the four part back-rest ensures the SmartSeatPro can be easily configured to suit individual needs, aiding pelvic stability as well as trunk and head alignment. The back has three upper components which can be altered in height, depth, angle, offset and can be rotated. Whether the problem is a neurological condition, such as cerebral palsy, a head or spinal cord injury, or there are complex postural needs, the SmartSeatPro Paediatric offers all round support... just where it is needed.
