

Partial M-Fingers

Product descriptor

The Partial M-Fingers were designed for someone missing a portion of their finger. A custom molded, high strength carbon fiber socket can be constructed to provide the user with a custom fitted socket to provide optimum comfort and stability to control the Partial M-Fingers. The Partial M-Fingers are controlled by motion in the remaining finger so the user has direct control of speed and placement of the fingertip. This will allow for precise and rapid grasping of objects.
