Tanner hits failure to fund fishery

Proposals to improve the multi-billion-dollar Great Lakes fishery are doomed unless Governor James Blanchard's policy is overcome, former Michigan Department of Natural Resources (D.N.R.) director Dr. Howard Tanner warns.

Tanner, a former D.N.R. fish chief who is generally credited as being the architect of the Great Lakes salmon fishery, told other members of the Lake Huron Fishery Advisory Committee that without new money they cannot implement any plans which they may develop.

Both current D.N.R. director David Hales and members of the Natural Resources Commission (N.R.C.) have stated that Governor Blanchard has ordered them not to seek any additional money from the Legislature, Tanner told the Advisory Committee.

This, he added, means that to achieve their goals, sportsmen are going to have to pressure the Legislature for proper funding for the Great Lakes fishery WITHOUT getting D.N.R. biologists in trouble with Hales and Blanchard. Tanner has asked biologists to put a price tag on new measures needed to repair the fishery, even if they have to do so without publicly identifying themselves as the sources of the data. *(The circumstance of D.N.R. biologists having to try do their jobs in an atmosphere of fear of reprisals should by*

itself persuade all who have in the past doubted assertions of undue and even improper politically motivated meddling in D.N.R. operations, and the extent to which political considerations control ALL policy decisions of the Blanchard administration. Joel Garinger, Editor)

Tanner has been calling for increased funding for restoration of the Lake Michigan fishery in speeches around the state. At the April 17 meeting of the Lake Huron committee he extended that position to include Lake Huron.

Fishermen, Tanner contends, should not have to pay the entire shot. The businessmen and general public who benefit from the fishery's economic impact should be paying a share through the state's general fund.

Tanner confirmed what D.N.R. sources have privately been telling *The Call* for more than a year: that David Hales, D.N.R. director, has silenced employees from outlining natural resource budget needs to the Legislature. It seems as though Blanchard doesn't want it publicly revealed that natural resource and conservation programs are suffering due to lack of funding support from his administration during an election year in which he is seeking re-election.

D.N.R. sources point out that their department's operations are losing ground due to inflation and wage increases that must be absorbed within the existing budgeted funds

with no new money being provided.

D.N.R. fisheries division personnel and a growing number of outsiders are also critical of fish chief John Robertson for not laying off some personnel. According to some accounts, more than 80 percent of the division's money goes for wages and benefits, leaving inadequate funding for biologists and technicians to complete the projects they spend their time planning.

In another development, the Lake Huron committee learned that Robertson has agreed to restore a lake-wide Lake Huron creel census in 1991. Field biologists consider the creel census to be the most valuable management tool they have had on the big lakes.

This year, the only creel census data on Lake Huron are being collected at Rogers City, Harrisville and Oscoda. In the future, creel census clerks will return to the St. Mary's River and Saginaw Bay.

Other ports to be censused annually or every third year are St. Ignace, Les Cheneaux Islands, DeTour, Drummond Island, Rockport, Alpena, Grindstone City, Harbor Beach, Port Sanilac, Lexington, and Port Huron.

The committee decided to focus its initial efforts on developing a plan to improve the Saginaw Bay fishery.

Major elements of the plan are expected to include obtaining more walleye (either by planting them or through natural reproduction), habitat improvement, and controlling white perch numbers.

Lake Huron fisheries chief Jim Johnson told the committee the impact of white perch will be devastating unless a large enough walleye population is developed to curb their expansion.

The walleyes, Johnson explained, prefer the abundant smelt and alewife to perch. Until there are enough walleye to thin the smelt and alewife, they will not switch to perch, he said.

According to Johnson, a factor limiting walleye numbers is that fish that have been stocked in Saginaw Bay are from a river spawning strain (Muskegon River). Spawning habitat in the rivers emptying into Saginaw Bay is limited.

Johnson would like to see a huge infusion of lake-spawning walleyes into the bay. These could be obtained from Lake Erie, or from federal hatcheries.

Johnson said that Saginaw Bay can support up to six times as many walleyes as it does now.

Tanner said it is more realistic to rely on stocking walleyes than to expect natural reproduction to fulfill the desired population.

From *The Northwoods Call*, May 2, 1990.

1990 RAFFLE PRIZE WINNERS: Tony Shaw, Warren (King 920 LCD graph), R.E. Rutt (2 Riviera 300 downriggers), Fred Bach (4 rod & reel sets), Joe Baker, Allen Park (1-day charter aboard Captain Bob Kring's "Drifter"), and Kathy Burbary (\$100 tackle package). Congratulations to all the lucky winners!!

FISHIN' TALES is published monthly by the **DETROIT AREA STEELHEADERS, INC.** Views expressed in it are those of the authors, and the Editor. Its purpose is to inform members of events which affect sport fishermen, and to teach and guide the public to respect and appreciate our Great Lakes, rivers and land.

1990 Ladies Day at Oscoda

June 30 will find Detroit Area Steelheader skippers and their crews at Oscoda for our annual boat trolling tournament at that port. This has always been one of our fleet's favorite tourney destinations, and this year it will be even more special than usual — it's our annual Ladies Day outing. Everyone who has participated in a Ladies Day tournament in the past knows how exciting and enjoyable this particular event always is!

As has been the case in the past, special rules apply in this one. Men are only allowed to set rods and net fish. Once there is a hook-up, the ladies must bring the fish to net. I can certainly vouch for their ability to do just that — we've seen some great catches by the ladies at previous tourneys!

Once again, one of the day's highlights will be the traditional "Pot Luck" picnic following the weigh-in. If all the ladies will be so kind as to bring a dish of their choice to pass, and if we can again coax Bob and Linda Mitchell into serving up their great grilled salmon (made with that special recipe!) to go along with the dogs, burgers and beer, I'm sure it will turn out to

be *ONE GREAT DAY* that everyone on hand will long remember!

Of added interest at this Ladies Day tournament will be the presence of the local Arts and Crafts show near the beach area in the town of Oscoda, being held on the same weekend as our tournament. This exhibition also coincided with our 1988 Oscoda tourney, and I can assure you that it's well worth seeing!

Marina and lodging information was given out at the last meeting; those who need that information can call me. The meeting for skippers will be held at 5:00 a.m. Saturday at Fellows' Marina just north of the Au Sable bridge. Turn into the entrance to the Oscoda Yacht Club and then hang a left.

There'll probably be a mixed bag of fish taken, with lakers predominating. Some good waters to start the tournament in will be straight out from the pier heads about three miles, to the drop-off.

So until we see you at the docks at Oscoda, enjoy your fishing!

—Dick Shirk

Boat Trolling Chairman

Lake trout are 'clean'

It is a go to plant the 1.2 million lake trout raised at the Marquette state fish hatchery. The approximately six-inch fish have been declared devoid of the EED virus that has killed millions of lake trout in state and federal hatcheries.

The Great Lakes Fish Disease Control Committee reversed an earlier request that the fish not be planted due to reports they were infected.

Exhaustive testing of fish from the hatchery at the national fish health laboratory in Lee-town, W. Va. found no evidence of the disease, hatchery manager John Driver points out.

Confidence in the federal laboratory's finding that the hatchery is "clean" is so high that Minnesota has agreed to ship mature lake trout to Marquette to be held as brood stock. Driver says there is no way Minnesota fisheries officials would "sacrifice" the brood stock if they thought EED was present.

Driver had to get rid of his brood stock fish when the disease invaded the hatchery. The new fish originate from lean lake trout taken near Isle Royale. Driver considers them "darn good stock, which assures our program of an egg source in the future."

The water source and outdoor rearing raceways at Marquette have been disinfected twice to eliminate the virus. Several million young trout were buried, at Marquette and federal hatcheries at Pendill's Creek in Michigan, and at Iron River, WI, where the disease originated.

Despite the federal lab findings and visual evidence that the yearling lake trout at Marquette are healthy, Prof. Terry Bradley at the University of Rhode Island continues to insist that they are EED carriers. The Marquette lake trout are being planted in the state's inland lakes. From *The Northwoods Call*, April 1990.

Soviets may rub out zebra mussels

Soviet scientists may have developed some kind of biological means of controlling the zebra mussel, an Environmental Protection Agency (EPA) official has reported.

Valdas V. Adamkus, the EPA's Great Lakes national program manager, said he planned to visit the Soviet Union earlier this year to learn more about efforts there to eradicate the aquatic vermin when delays developed. *(See story below for more information on Adamkus' travel plans, and other details. Editor)*

"I received a Telex from them that they

have done some scientific work in that area and they are willing to actually share with us their experience," said Adamkus.

He said he had no details about what the Soviets are doing. But if their methods are biological, they apparently would involve other live organisms that would attack the mussels, Adamkus told the House Public Works and Transportation Subcommittee on Water Resources.

The zebra mussel is a thumbnail-sized creature that originated in the Caspian Sea and the Black Sea, both in the Soviet Union.

It is thought zebra mussels arrived in the Great Lakes in 1986.

The inedible pests attach themselves to boats, piers, rocks and pipes serving municipal water and sewer systems. The city of Monroe almost lost its water supply last year when millions of mussels clogged its Lake Erie water intake pipe.

"I sort of fell off my chair" when Adamkus mentioned the Soviet offer of assistance, said Rep. Fred Upton, R-Mich.

From Associated Press reports.

Politics stalls war on mussels

The independence movement in Lithuania has snagged an effort to control zebra mussels in the Great Lakes. Federal officials said that visa problems encountered by Valdas V. Adamkus, a regional administrator of the EPA and a native of Lithuania, has delayed a scientific team's visit to the Soviet Union until July 20.

"Because Val is a Lithuanian by birth, there was some sensitivity," said John Grand, an EPA spokesman in Chicago. "Apparently it was because of the Baltic situation."

The zebra mussel is believed to have originated in the Soviet Union's Caspian Sea. It entered Lake St. Clair in 1986 when a ship emptied its ballast water, used to balance a ship on ocean crossings. The water, taken on the ship in Europe, contained the mussel.

The tiny mollusk, which averages some 40,000 offsprings each year, has spread rapidly in Great Lakes waters since. The ½"-2" mussels attach themselves with tentacles to water intake screens, reducing the flow. They also attach to the bottoms of recreational boats and, thus, can be transported into other lakes and rivers.

Adamkus was scheduled to lead a six-member scientific mission to Lake Baikal in the Soviet Union March 21 to study control measures developed by the Soviets. But Lithuania declared its independence from the Soviet Union on March 12, and visa problems surfaced.

Grand said negotiations are under way and it appears that Adamkus will be cleared to participate in the July trip.

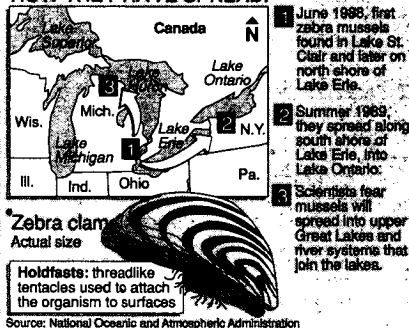

EPA officials don't know the nature of the control measures the Soviets have developed. "We just have a very terse communique and an offer to bring us up to speed," said Vacys Saulys, deputy director of the EPA's Great Lakes National Programs Office. "We'd be very surprised if they had any chemical control."

He said the zebra mussel problem is different in Europe than in the United States. The mussel was first described in literature in 1769,

Lakes get unwanted mussel

Zebra mussels grow up to two inches long and powerfully attach themselves to objects with a threadlike "holdfast." They reproduce quickly, clogging water intakes, damaging boat hulls and stealing food from the lakes' fish.

HOW THEY HAVE SPREAD:

reportedly found in the Black and Caspian seas.

EPA officials assume some type of natural predators have since developed in Europe. For

the United States, however, the mussel is a new problem and no natural predators have so far developed. "We're just seeing the very beginning of the zebra mussel invasion, and it is expected to take off before leveling off," Saulys said.

Saulys, who was born in West Germany, is also of Lithuanian descent. He was not scheduled to make the earlier trip, but is a member of the team going to the July 20 meeting with Soviet scientists. He has not had any visa problems.

A five-year scientific exchange program with the Soviet Union is about to conclude and the Americans going to the Soviet Union hope to negotiate a new plan that will include a zebra mussel project.

Meanwhile, Canada is relying on chlorine to kill off zebra mussel larvae before they can become adults and clog water intake pipes.

Bad weather continues on tourney trail

Harbor Beach was host port for our third boat trolling tournament of the 1990 season, and for the third time Mother Nature challenged our determination to go fishin'! Come on, Lady, give us a break!! I've never seen so much north and east winds as what the spring of 1990 has shown us. But, fish we must!

Despite the windy and cool conditions, Saturday is still tourney day, and 39 boats showed up, one of the better turnouts for a regular tournament in recent years.

The 6:10 a.m. start found boats heading north or straight out from the pier heads. The 9 o'clock fish call showed a minor trend — the boats up north were getting a few fish. Shortly after this, the water began to build up with winds increasing, and it started to look rather threatening. But just as fast as it started, the wind and waves began to 'lay down' and by the noon fish call, we were enjoying very fishable conditions. The second fish call revealed that some of the boats up near Port Hope were doing quite well. Some of the skippers were practicing a lot of fish conservation by letting 'em go, even before getting them near the boat... right Tom??

The weigh-in at the Park Pavilion saw most people trying to get warm after their chilling experience of the day. Only 23 of the 39 boats had fish to weigh in — it was a tough day! However, everyone ate well, drank well, and had a lot of war stories to swap. "Anticipation" ended up in first place overall with an impressive catch of kings. Congratulations, Rob! "Kemo"

FIRST PLACE: "ANTICIPATION" with Rob Pinskey, Mike Pinskey, Mark Rubbel and Bruce Moore.

had the Big Fish winner, a 19 pounds-plus king. Nice fish, Bob! In fact, the first four fish in the Big Fish Pool were all 15 pounds-plus!!

The Team Doubles line-up was selected and assigned for Sunday's action, but all this was undone by ol' Mother Nature. The rains came, the northeast winds blew, and the cold

remained... so no Team Doubles this time!

All I can say is "Keep the faith, fellows. Sooner or later, the weather law of averages will be in our favor in 1990!"

Fishing's Funniest One-Liners

Henny Youngman (Take his wife — please!) is said to be the king of the one-liners, but that's only because comedy audiences insist on sitting in smoky nightclubs or watching latenight TV talk shows. If they wanted to hear some *really* funny one-liners, they would hang around marinas and tackle shops instead.

Following are but a few examples of the many gems spoken by anglers, and by other strange types with whom they come in contact, such as weathermen. Like Henny's jokes, these are heard and re-heard but they only become more sublimely ridiculous with each telling!

- ★ "But dear, just think how much money we could save if we had our own boat."
- ★ "Seas three feet or less. Inland waters calm to a light chop."
- ★ "No, I didn't check the gas, but I'm sure there's plenty."
- ★ "The game warden never shows up around here."
- ★ "It's just a little rough spot on the line — nothing to worry about."
- ★ Never mind the net. I can lift him in."
- ★ Skip the Dramamine. I never get seasick."
- ★ This rain will clear up in a minute."
- ★ The bottom isn't *too* soft; I'll get out and wade."
- ★ "Save your breath, skipper. I learned how to operate a free-spool lever back home in Nebraska."
- ★ "Let me screw down your drag for you."
- ★ That'll stop him."
- ★ "This is a new kind of reel that doesn't backlash."
- ★ "The wind will lay when the tide changes."
- ★ "I know these waters like the back of my hand."
- ★ You can only get sunburned between 10 in the morning and 3 in the afternoon."
- ★ "That's the biggest barracuda ever caught on my charterboat. You ought to have it mounted."
- ★ "Trust me. I'd never tell anybody else how to get to a fabulous fishing spot like this."
- ★ "My wife will love the new rod and reel I bought her."
- ★ "I learned how to handle catfish bare-handed a long time ago."
- ★ "I'll quit fishing in plenty of time to make the PTA meeting."

Waterfront View

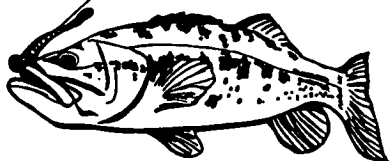

- ★ "According to the chart, this creek goes all the way through. Should save us at least 15 minutes."
- ★ "Red sky at night, sailor's delight."
- ★ "Certainly I've memorized the new fishing rules."
- ★ "Relax. When we get around that next bend you'll be able to see the camp."
- ★ "If you pick up a crab this way, he won't be able to get you with his pinchers."
- ★ "One line should hold the boat long enough to go in and have lunch."
- ★ "You should do the poling just long enough for me to get rigged up and then I'll take over."
- ★ "It's called Vienna sausage. Try it. You'll love it."

— Vic Dunaway

"Wet Paint" wins first tourney

Saturday morning at the Detroit Area Steelheaders tournament at St. Joseph, a rain of several days' duration finally stopped, but the accompanying wind didn't. What had been an offshore wind shifted and was coming across the lake, with rollers breaking over the pier heads. After repeated delays, it was decided to cancel Saturday's tournament.

Later that afternoon, the waves subsided enough to allow many of the boats to go out to try their luck. However, back on shore, to keep spirits high and to appease the Weather Gods, a musical extravaganza took place. The Detroit Area Steelheaders "Harborside Wandering Minstrel Band" (aka Doug and the Slugs) were performing various selections, including their version of "The Great Detroit Steelheaders."

Sunday morning brought perfect conditions. The calm seas and clear skies had everyone anticipating a good day of fishing, but sentiment was divided on the best plan of attack. Many boats went straight out to deeper water, while

SECOND PLACE: "NET PROFIT" with Paul Gualdoni, and Curt and Bill Shackleton.

others cruised south toward the Power Plant. At the 9:00 a.m. fish call, those who had ventured south seemed to be catching a few more fish.

Spoons seemed to be the order of the day, but since we left our spoon box on shore, we had to go with what we had on board, body baits.

The noon fish call had "Net Profit" and "Harmony" in the lead, with "Formulator" close behind. As we trolled back to the pier heads, our lines started to go off, and when we finally pull-

ed lines for the day, we had nine fish in the box!

At the weigh-in, we had no idea where we had placed. At last, Dick Shirk read out the results, and to our amazement, The "Wet Paint" Crew had its first tournament win, barely edging out "Net Profit."

Thanks to all who attended — I hope you had as much fun as we did!

— Mike Wakulski

for
JULY FISHIN' TALES
is
JUNE 26, 1990

HERE'S HOW TO GET TO DETROIT
AREA STEELHEADER MEETINGS:

For Your Information

**ZEBRA MUSSELS, DEBATE
HIGHLIGHT JUNE MEETING**

This month's meeting features a presentation by Steve Steward on zebra mussels, and a debate between Steve Hamilton and Bob Mitchell, Detroit Area Steelheader stalwarts, on whether boat trollers fishing the "scum line" for steelhead is depleting river steelhead stocks.
