A story about the greatest “lost” treasure in history

Years ago, a pirate Captain known as Satoshi Nakamoto was anchored in a cove...

…the manuscript inspired a global currency revolution…

For the first time, P2P (Pirate to Pirate) commerce could be conducted privately and without fear of reprisal or confiscation.

Once finalized, transactions could not be retracted or changed and were permanently recorded on a public pirate ledger.

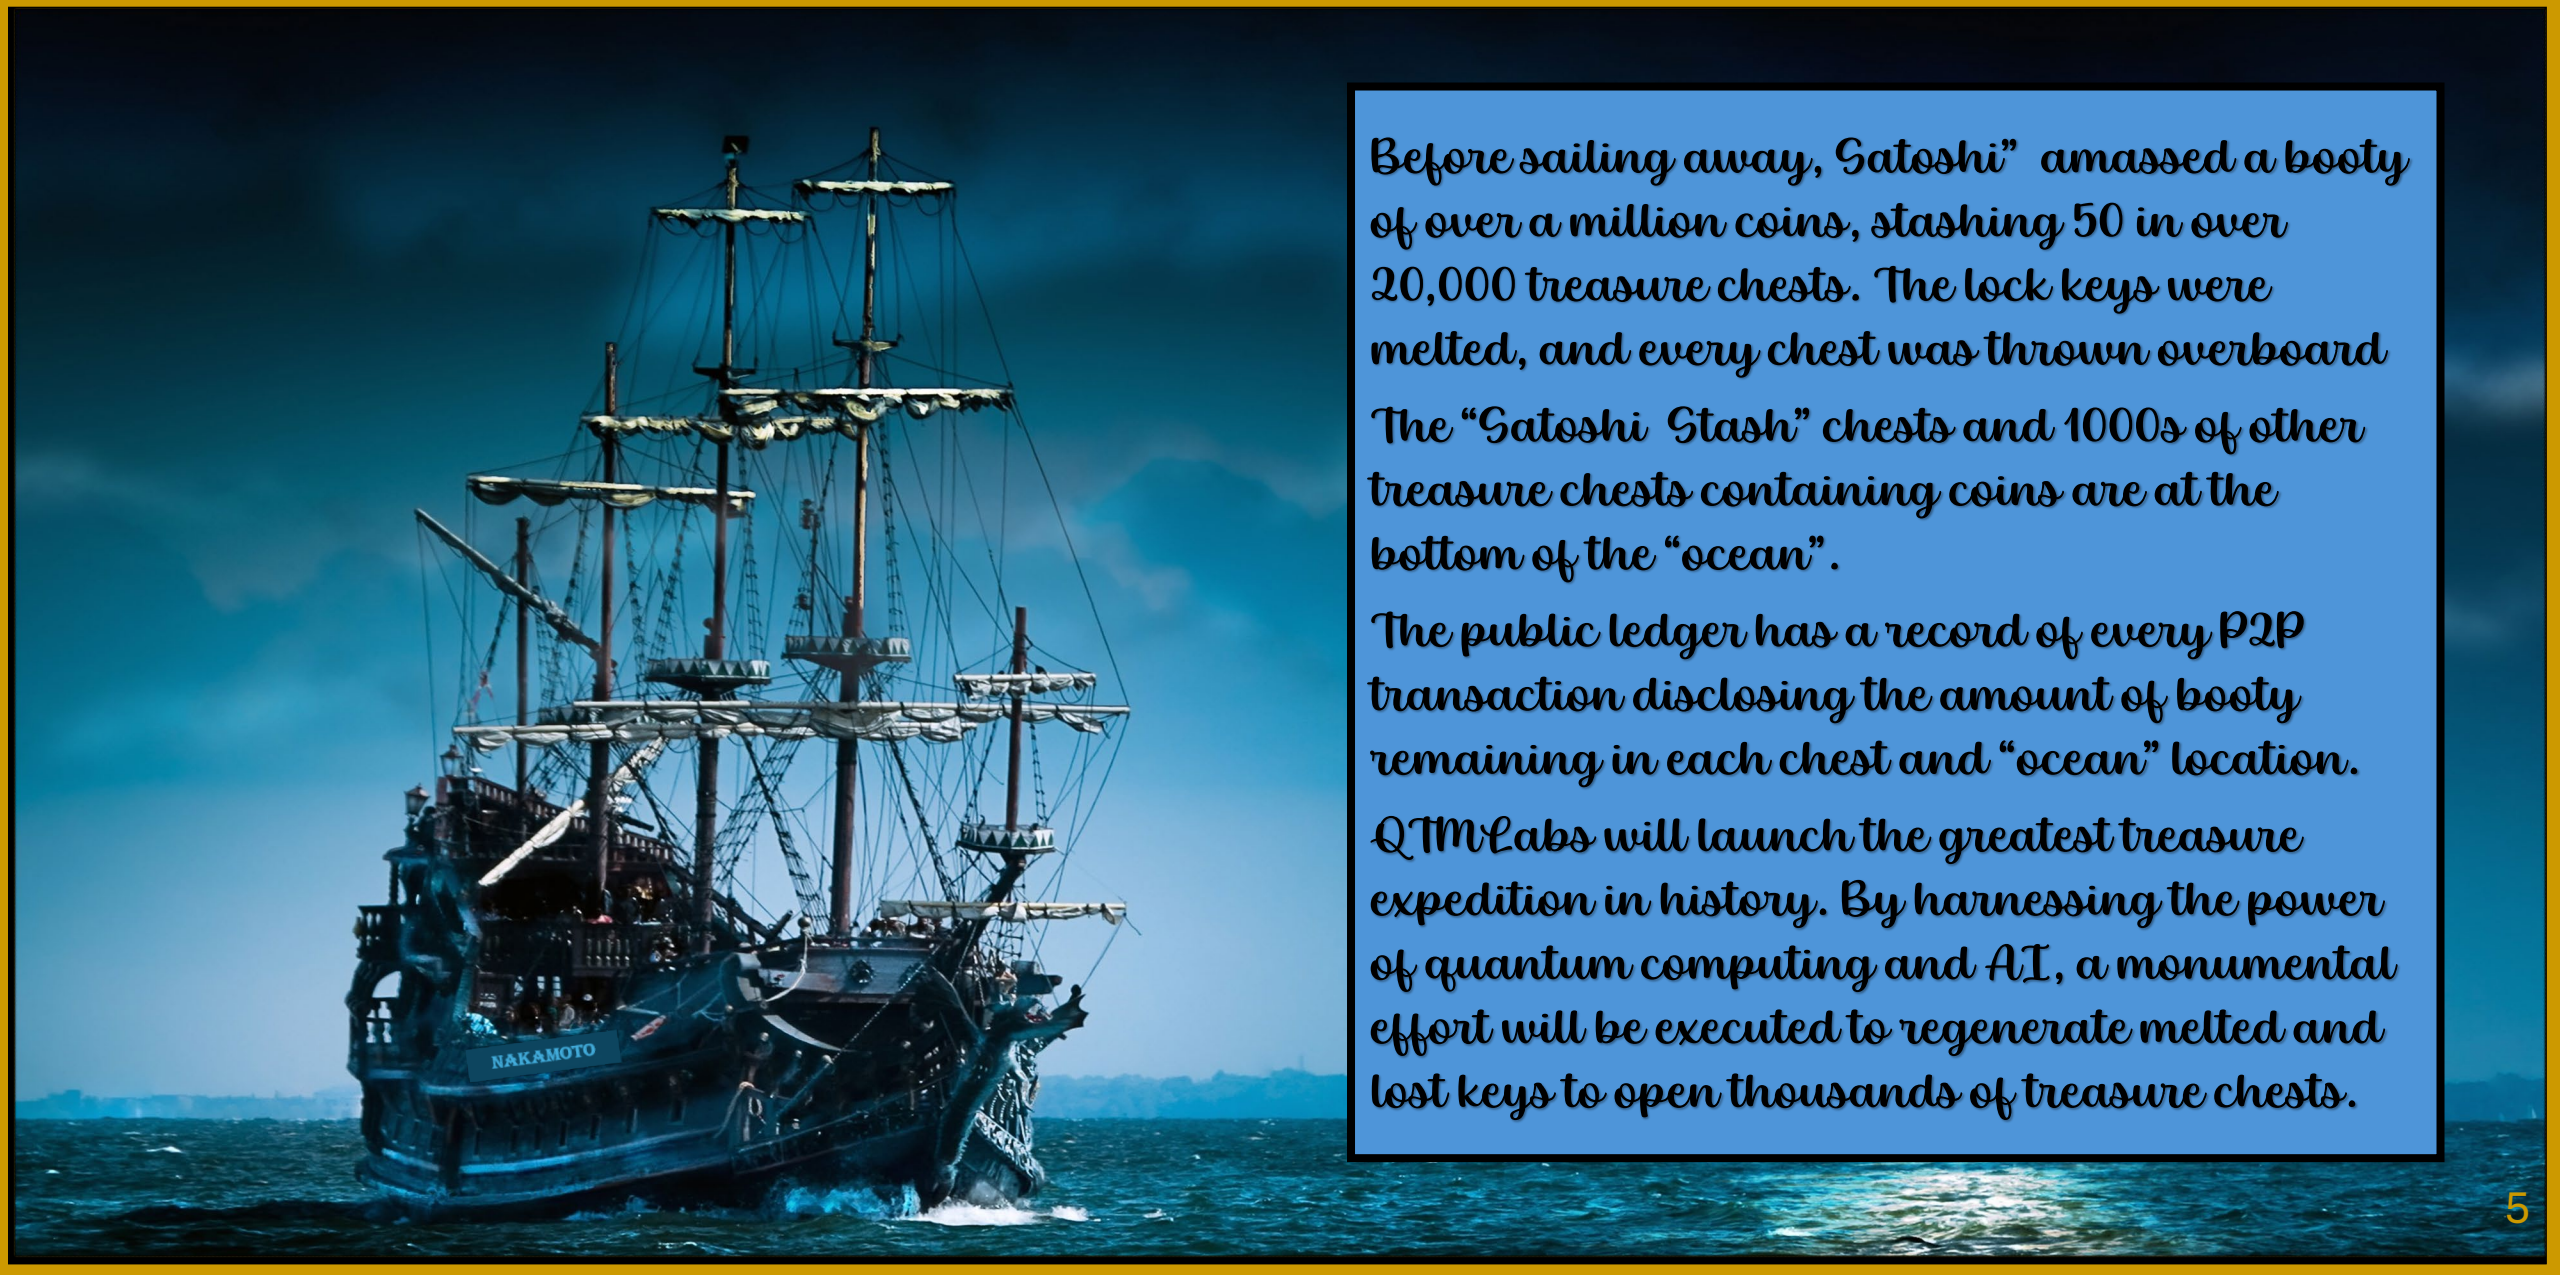

…embraced by “dark” markets and other crypto pirates….

P2P transactions could be made from any ship located at any port.

Two pirates could buy and sell goods between each other without revealing their identities or ship location.

...for reasons unknow, Satoshi sailed away, never to be heard from again.

Before sailing away, Satoshi" amassed a booty of over a million coins, stashing 50 in over 20,000 treasure chests. The lock keys were melted, and every chest was thrown overboard

The "Satoshi Stash" chests and 1000s of other treasure chests containing coins are at the bottom of the "ocean".

The public ledger has a record of every P2P transaction disclosing the amount of booty remaining in each chest and "ocean" location.

QTMLabs will launch the greatest treasure expedition in history. By harnessing the power of quantum computing and AI, a monumental effort will be executed to regenerate melted and lost keys to open thousands of treasure chests.

Over 40,000 OG pirate treasure chests…

*

...containing over 2,000,000 OG pirate bitcoins in treasure.

Goal is to begin “cutting skeleton keys” * in 2027

* “cutting skeleton keys” is metaphorically describing the process of re-generating lost private keys

95% of "the booty"* will be gifted away**

*** "the booty" is the number of bitcoins QTMLabs is allowed to recover and distribute after:**

1. All legal and regulatory compliance requirements have been satisfied.
2. Required number of bitcoin miners agree to add the QTMLabs transactions to their blocks.
3. Required number of full node operators agree to validate QTMLabs transactions.
4. An acceptable bitcoin re-distribution rate (hourglass) is implemented.

** Gifted to owners of "OG Cypherpirate Captain Nakamoto" artpiece
