What are Standards?

“Standards are documented agreements containing technical specifications or other precise criteria to be used consistently as rules, guidelines, or definitions of characteristics, to ensure that materials, products, processes and services are fit for their purpose.” [ISO 1997]

Software Engineering Standards

- **Software & System Engineering Standards**
 - PSS-05 (ESA)
 - ISO-12207
 - DoD Mil-Std 2915
 - IEEE 1074-1995
- **Software Process Improvement Standards**
 - CMM
 - ISO-15504 (SPICE)
 - BOOTSTRAP
 - **Quality Improvement Paradigm**

Compliance

- *Compliance is the extent to which software developers have acted in accordance with practices set down in the standard*
- *Consistency between actual development process and normative models embedded in standards.*

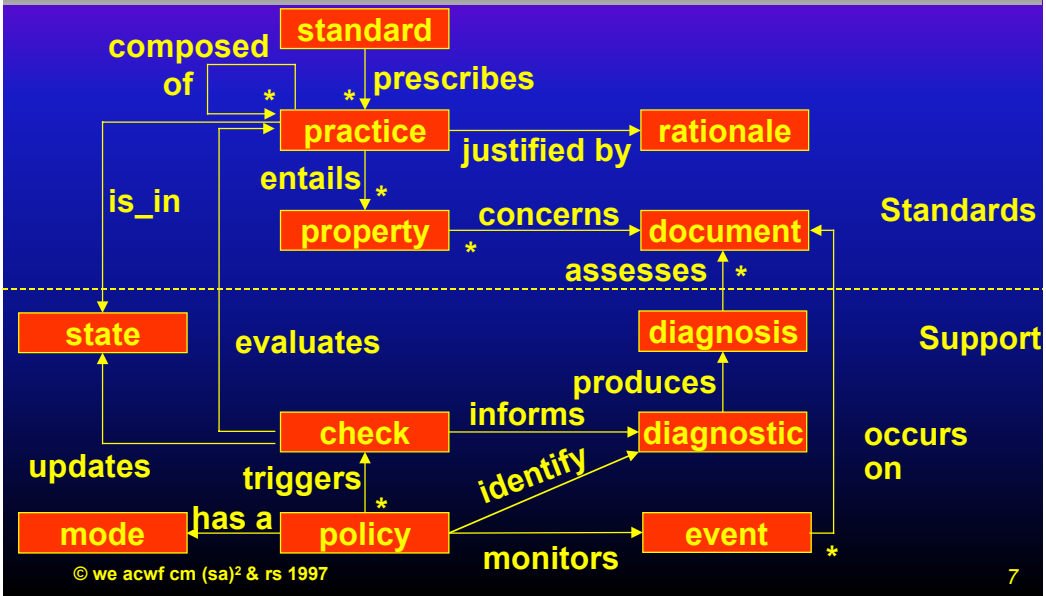

Overview

- 4 Tool Support*
- 5 Related and Further Work*

Model of Compliance

States of Compliance

Sample Practices (PSS-05)

UR04: *For incremental delivery each user requirement shall include a measure of priority so that the developer can decide the production schedule.*

UR10: *An output of the User Requirements phase shall be the User Requirements Document.*

Policy Modes

- **Error:** *Prevent the developer from completing the action that would result in non-compliance*
- **Warning:** *Indicate to the developer that the result of the action is non-compliance*
- **Guideline:** *Suggest to the developer that compliance to a practice should be checked*

Diagnostics

Statistics: *Indicate percentage of non-compliant document components.*

List: *Indicate the non-compliant document components.*

Traversal: *Generate an iteration of all non-compliant document components.*

What needs to be specified formally?

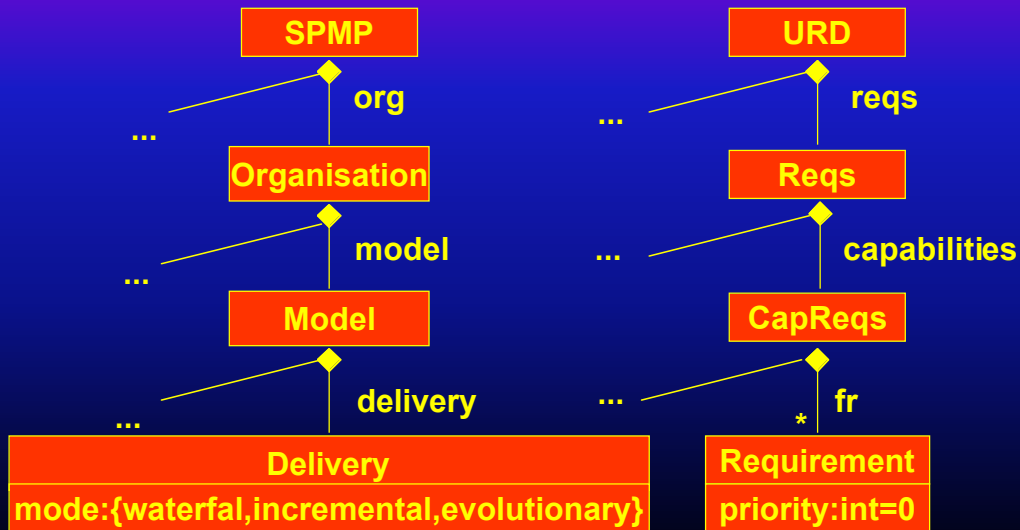

Document Schema Specification

- **Formalisation of practices must assume a certain document type structure**
- **Defined in document schema specification**
- **Notation: Subset of UML class diagrams**
- **Exploited for checking**
 - consistency of the standard formalisation
 - compliance of developed documents to document templates prescribed by standards

Document Schema Sample

© we acwf cm (sa)² & rs 1997

15

Practices and Properties

- **Properties are specified in first-order logic.**
- **Formulae use vocabulary of document schema specification**
- **Example:**
 $(spmp.org.model.delivery.mode=incremental) \Rightarrow \forall r \in urd.reqs.capabilities.fr: r.priority \neq 0$
- **Practices are conjunctions of properties**
- **Composite practices are conjunctions of component practices.**

16

Event Specification

■ Atomic Events:

- Update
- Close
- Open
- Baseline

■ Logical Event Composition:

- Open(doc) OR Update(att)

■ Temporal Event Composition (as in FLEA):

- Open(doc) THEN Update(att)
- Update(att) IN-TIME(5h) Baseline(doc)
- Open(doc) TOO-LATE(5h) Close(doc)

Policy Specification

■ Policies are tuples $P=(E,P,M,D)$ where

- E is an event specification
- P is a practice
- M is a policy mode
- D is a diagnostic function

■ Example:

`Update(spmp.org.model.delivery.mode), UR04 ,WARNING, STAT`

Prototype Architecture

Document Management

DOORS: Formal module "System requirements" (Current: last baseline)

Object Identifier: Car system requirements

- SR1000 **1 Functional Requirements**
- SR1001 **1.1 Power car**
- SR1002 **1.1.1 Move car**
- SR1003 **1.1.1.1 Move forwards**
- SR1004 The car shall be able to move forwards at all speeds from 0 to 200 kilometers per hour on standard flat roads with winds of 0 kilometers per hour, with 100 BHP.
- SR1005 **1.1.1.2 Move backwards**
- SR1006 The car shall be able to move backwards to a maximum speed of 20 Kilometers per hour.
- SR1007 **1.1.2 Accelerate car**
- SR1008 The car shall be able to accelerate from 0 to 100 Kilometers per hour in 10 seconds on standard flat roads with winds of 0 kilometers per hour.
- SR1010 The car shall be able to accelerate from 100 to 150 kilometers per hour at a rate of 5 kilometers per second on standard flat roads with winds of 0 kilometers per hour.

Compliance Management

DOORS: Formal module "PSS-05-D" (Current: last baseline 0.0)

Object Identifier: practices for the PSS-05-D standard

- PR06 **1.3.6 SR06**
For expedient delivery, each software requirement shall include a measure of priority so that the developer can decide the production schedule.
- PR09 **1.3.7 SR07**
References that trace software requirements back to the LPO that accompany multi-software requirements.
- PR40 **1.3.8 SR08**
Each software requirement shall be verifiable.
- PR41 **1.3.9 SR09**
The subjects of the SR shall be directly reviewed during the Software Requirements Review.
- PR42 **1.3.10 SR10**
