digital inclusion

DIGITAL INCLUSION

"Digital Inclusion" is a strategic partnership project in the field of adult education. The maim purpose of the project is to improve, through the exchange of best practices, staff expertise of the organizations involved in adult education in the field of digital literacy. We are working especially with some target groups of people who are most disadvantaged in the labor market and more exposed to social exclusion, such as immigrants and the unemployed. International co-operation provides a good avenue of exchanging ideas and best practices about ienhancing digital inclusion in various European societies.

Objectives

- Exchanging experiences about improving digital skills to exploit the potential of ICT.
- Cultural sensitivity in order to be more integrated in the society.
- Creating incentives for acquiring new ICT related skills
- Fostering digital literacy to increase the employability and also extend the knowledge

Learning Activities

The project objectives will be achieved by means of workshops between partners and preparation of trainers

Transnational Project Meetings

Partners will exchange experiences during five transnational project meetings, held in Italy, Cyprus, Estonia, Turkey and the United Kingdom. These meetings will also provide a practical way to meet face-to-face and plan project activities and outputs. And support effective communication. Digital Inclusion experiences, thoughts and ideas will be discussed.

Joint Staff Training Event

The Joint Staff Training Event is designed to train the staffa bout main concepts and topics related to digital inclusion. The aim is that partner staff would become experts in integration with the help of social and digital learning and they would be ready to transfer the acquired knowledge by acting as educators.

Outputs

Project consortium will conduct research and gather best practices of digital inclusion in participating countries.

Research Report

Each partner will conduct research about the situation of economic situation, influencing unemployment in their own country. An overview about digital inclusion will be given and main trends influencing digital inclusion and unemployment will be discussed. This will allow mapping of the state-of-the-art and compare needs in partner countries, as well as build upon partners insights about digital inclusion

Best Practice Cases

Each partner will gather 15 Best Practice Cases about digital inclusion from their countries. These cases will be gathered and discussed in order to select a few of these best practices , which could be most inspiring for digital inclusion in other European countries. Transnational learning and exchange of ideas will contribute to better and more enhanced projects of digital inclusion in the future.

Impact

The project will have an impact on the participating organizations, learners, social partners, young people and marginalized parts of the society by narrowing the knowledge gap, providing awareness of the key concepts and best practices related to digital inclusion, allowing for better employability, social inclusion and mutual understanding.
