Kambria Solar Lamp Post & Planter
Sku: 302022, 312022, 342022

Care Instructions

Clean any dirt and debris from the solar panels, the panels cannot recharge if the light is obstructed. Use a soft cloth to clean the panels. Do not use abrasives or chemicals that might scratch or damage the UV coating.

In a region where snow and ice are likely, and the light assembly is covered with snow for an extended period of time the batteries will require recharge for at least 8 hours.

Do not mix old batteries with new batteries.

Do not mix alkaline standard (Carbon-Zinc) or rechargeable (Nickel-Cadmium) batteries.

Recycling
Please dispose of batteries properly. Consult your local telephone listing for a battery recycling center in your area.

Read the instructions and precautions before use of this product

Please keep this instruction manual for future reference

For warranty information, please refer to the back page of this instruction manual.
Battery Replacement

Note: The batteries in your solar lantern come pre-installed from the factory.

Twist the top of lantern head counter clockwise to remove solar panel housing.

Carefully lift the solar panel housing off the lantern head. The battery compartment is located under the solar panel.

Remove old battery.

Replace old battery with 1 AA rechargeable Ni-MH battery. Reference polarity direction inside battery compartment.

Align tabs on lantern head with holes on solar panel housing. Twist solar panel housing clock wise to secure.

The rechargeable battery need to be fully charged before operating light assembly.

Carefully remove the contents from the package. If any parts are missing do not attempt to use the product until they have been obtained and correctly installed.
Instructions for First Time Use

Allow lantern to charge for at least 8 hours in full sunlight with the ON/OFF switch in the OFF position. The ON/OFF switch is located under the solar panel. The switch has three positions BW, Off, and WW. Once the batteries are fully charged, set the switch to the BW for bright white light, or WW for warm white light. If the lantern doesn’t turn on after initial charging, ensure battery is making contact with terminals.

Where To Place the Solar Light

Place the solar light in an area where it will receive direct sunlight for at least 8 hours per day. The number of hours the light is illuminated is directly proportional to the number of hours of sunlight it receives. If the light is placed in a shaded area, it will not be able to fully charge and its burn time will be limited. Do not place the light near other outdoor lighting like porch or streetlights. These may fool the sensor and keep the light from coming on, or cause it to turn off automatically.

CAUTION: To prevent product damage or personal injury from tip-over, lamp post planter base must be placed on a flat, level surface and be filled with an adequate amount of soil, rock or gravel. (Minimum 5-10 lbs)
