

**2003-2004 Ford Trucks with a 6.0L diesel** were originally equipped with a dual mass flywheel. Platinum Driveline offers a solid flywheel replacement, part # **167582**. Ford discontinued the OE dual mass flywheel and is now replacing them with the solid flywheel design. Along with clutch kit **07-180**, this flywheel acts as an OE replacement. In addition, the new flywheel comes with new bolts required for installation. Please do not re-use the OE solid flywheel bolts, always use new bolts which are provided.
