

**2005 and newer Dodge Trucks with a 5.9L/6.7L** have aftermarket performance engine parts available. These parts can produce over 900 ft. lbs. of torque. This is usually overwhelming for the OE clutch kit and the aftermarket dual mass flywheel conversion kits offering a single clutch disc.

Platinum Driveline offers a dual disc design clutch kit that is able to handle these extreme torques. Part # **05-902** includes a performance pressure plate, dual ceramic/organic clutch discs, an intermediate drive plate, solid flywheel, new clutch fork and hardware for installation.

It is also recommended to replace the hydraulic system with our part # **PS0523-2** to ensure proper slave cylinder travel.
