

2005-2012 Dodge Turbo 5.9L/6.7L Cummins G56 Transmission: Platinum Driveline offers a solid flywheel replacement for the OE dual mass flywheel. This flywheel (part # **167437**) is for vehicles that have had a competitor's flywheel installed previously, eliminating the engine adapter plate. Our flywheel comes with the mounting bolts and a new pilot bearing.

Our clutch kit **05-224** can be used with this new flywheel. It has a larger diameter of 13" providing more torque capacity.

Platinum Driveline also offers an OE replacement flywheel (part # **167436**) that can be used with the engine adapter plate. If the OE engine adapter plate is not reusable, they can be hard to find. In this instance, part # **167437** can be used.

It is very important to mention that the OE hydraulic system does not have sufficient slave cylinder travel. Along with a difficult bleeding procedure, it is recommended to replace the hydraulics with an upgraded pre-bled system offered by Platinum Driveline. Part # **PS0523-2** is also available and will save time and money as it is produced to handle the above clutch kit/flywheel conversions.
