5 BIOLOGICAL LAWS

1st

Every disease and symptom originates from a DHS, it must meet the 3 criteria - a highly acute, unexpected and isolating conflict shock that occurs simultaneously on all 3 levels: the Psyche, the Brain, and the Organ. The content of the conflict determines which organ will be affected and the brain is the mediator of which SBS is activated.

2nd

Every SBS runs in two phases as long as the conflict has been resolved. The resolution is incredibly important for the biological program to finish.

“If the patient has been made aware of all the facts, he will no longer need to get frightened by his symptoms. He can now fully accept these as the healing symptoms they are – all of which had until now caused fear and panic. In the greatest number of cases, the whole episode will pass without any serious consequences.” - Dr. Hamer

3rd

This law connects the Senseful Biological Special Programs with the evolutionary development of the embryo. The three germ layers are: endoderm, mesoderm and ectoderm. These tissue layers are mediated via the brain from the impact of the lesion or concentric ring known as the Hamer Focus.

4th

Microbes don't cause diseases instead the ontogenetic system of microbes play a beneficial role in the healing phase which correlate to the three embryonic germ layers.

5th

Every “disease” is part of a Senseful Biological Special Program of Nature whose function is to assist humans and animals during unexpected distress. Nothing in Nature is meaningless, malignant or diseased.
