GoPod 90 Overview

- - - - x

GoPod 90 is fitted with a rear kitchen and double doors. It has rear stabiliser legs and internal water tank. The toolbox on the front has equipment and there is a gas bottle on the drawbar. The GoPod is fitted with an awning and external plug to plug in 15amp power. Anderson plug for solar power and a drain pipe for the kitchen sink. Inside is a roof vent and fan. There a charger to plug in your phone and lights. This manual will go into how to use each.

”

Hooking Up

- - - - X

This part is **critical**. If there are 2 of you please double check each other. You **MUST** have the towball handle down and pin placed in. If you cant place the pin in, it's not properly down. Wind up or adjust so it drops onto the ball correctly. Plug the trailer lights in and test. Make sure jockey wheel is up and gas is OFF. Place jockey wheel handle on top of

drawbar not hanging down towards the road. It will catch and bend on driveways if it is. When unhitching please ensure the wheel chocks are in place to prevent the GoPod for rolling away from you. It is important that chocks are used every time you are unhitched even if the ground looks flat. Remove them once you are hooked back up again.

GoPod 90 Kitchen. You can see gas valve on the left hand side of kitchen

Operating the Gas Cooker

- - - - X

Turn on Gas Bottle on at the drawbar. Turn on the gas valve on the left hand side on the benchtop. Push in the gas knob on the stove to start gas flow. While gas knob is pushed and turned press the clicker. It might take quite a few goes to get it alight. [Check out this you tube video](#). Always turn gas and valves off after use. **Always** turn gas off for travel.

The Engel Fridge

- - - - X

The Engel fridge is a 30 liter and very efficient. Have it set to 4c for refrigeration and to prevent your salads from being frozen. The fridge will run on 12v power from the battery or if you are plugged into mains power it will run on 240v. Keep the lid latch latched to keep the cool air in.

Using the Awning

- - - - X

The awning is simple to use. [Watch this video.](#) Please use the guide ropes to secure the poles and pack away if windy. If its raining, pack away or drop one leg down lower than the awning mount on the GoPod to drain it away from the door or it can run inside.

GoPod Power

- - - - X

GoPod 91 is fitted both 12v and 240v. The 12v is a battery supply and the battery is charged by a battery charger powered by solar or 240v. When you get your GoPod you have about 24 hours to get your GoPod charging by either means. If you are free camping plug your solar blanket in during the day to keep the battery charged or if you are at a caravan park you will want to plug into the 15amp power. If you happen to be at home, we recommend using the 10amp adaptor as you will not be able to plug in your 15amp lead into your home. The 15amp to 10amp adaptor is located in the toolbox.

”

Filling up Water Tank

----- X

The water tank is 60l and there is a white ‘screw cap’ on the side and you can fill it with water. It will be pre loaded with our water in Myrniong but if you want to drain it there is a plug you can turn on and drain the tank. There is a drinking water hose in the toolbox you can use to fill the tank from taps.

Solar Blanket, Sink Drain and Storage Box

- - - - X

The solar blanket is located in the toolbox. Fold it out and lay in the sun. If you are leaving the campsite for the day you can pack it away or move it close to the GoPod. In this image is also the drain from the sink. The black hose in the toolbox is what fits onto this outlet. Also in this image is a black storage box you can put groceries in it. The lock for this is on the keychain.

”

Using the doors

- - - - X

The 2 doors on either side of the GoPod are two different keys. The doors also split, So you can have the screen door open for warm weather and still be able to lock it for security inside and out. To split the doors flick the little handle in between big handle and lock. Undo top hook on top of door. To lock doors flick handle to rear of GoPod. It wont lock if you don't flick it to the rear first. Always lock the doors before travelling.

Outside Sensor Light

- - - - X

The outside sensor lights will come on automatically at night. If they don't press the black button and they will activate. Likewise if you do not want them to operate press the black button to turn off.

Ceiling Fan

- - - - X

The switch for the ceiling fan is at the door. Turn the switch on and then press the middle button on this fan to power up. You can use it in 2 ways as indicated on the photos and either exhaust the air or bring air in. You can also press the button to make it go faster or slower. This is a great way to bring in fresh air or take out warm air.

What's in the toolbox

- - - - X

In the toolbox is

1. Stabiliser leg winder. Pull down stabiliser legs at rear of GoPod and use the winder on the big bolt on them to wind down to the ground. DO NOT FORGET TO WIND UP BEFORE LEAVING.
 2. Solar Panel
 3. Muk Mat
 4. Dust Pan
 5. Chocks for wheels which must be used at all times when unhooked and in use. This prevents you from possibly rolling away.
 6. Wheel spanner if you need to change a tyre also wheel jack
 7. A lock for the tow hitch in case you feel you need to lock it up
 8. Hammer and pegs for awning
 9. 15 Amp lead for GoPod to caravan park
 10. 10am lead to connect to 15 amp lead and into house.
