

Laboratory Report

Antiviral Activity Evaluation of PurePurge Coated Polypropylene Materials	EFFECTIVE DATE February 20, 2020
	REVISION NUMBER 001

EXECUTIVE SUMMARY

Polypropylene nonwoven materials coated with PurePurge were analyzed for antiviral activity. The samples were tested against an enveloped virus, Influenza A H1N1 virus (A/Puerto Rico/8/1934), following the modified standard ISO 18184:2019. Tested against the same procedure and virus strain, the PurePurge coated polypropylene were found to have comparable activity to a commercially available antiviral mask.
