## Weathertight, Efficiently Cooled Shelter Systems

---

UniFold's roof and walls overlap with the floor 1.5" above the surface, ensuring rain and shallow puddles stay out of the interior.

The twin wall rigid panel construction drastically reduces the energy required to cool the interior. The concertina folded walls deflect sun when directly overhead at its strongest.

### Ultra-Efficient Fulfillment: Ship Kits, Assemble on Site, Arrange into Camp

### Showers with Greywater Collection

### UniFold shelters in negative pressure bio-containment mode

## Specifications

- Designed for emergency disaster, medical, fire, police, ambulance, and military use
- Deploy in seconds on any surface with minimal assembly and no need for ropes or stakes
- Twin wall polypropylene paneled including rigid floor and weather resistant and insulated
- Exoskeleton structures are food grade, autoclavable, hygienic
- Easily heated and air-conditioned
- Reusable hundreds of times. Easily sterilized with UVC light.
