

**FOR IMMEDIATE RELEASE**

**Pinnacle Safety Products, LLC Unveils Enhanced Line of Electrical Lockout Devices to Boost Workplace Safety**

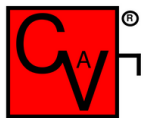

**Sanger, TX – 7/10/2024** – Pinnacle Safety Products, LLC, a leading innovator in commercial and industrial safety solutions, today announced the expansion and enhancement of its comprehensive line of electrical lockout devices. These critical tools are designed to warn others of equipment shutdown and aid in preventing accidental startup of machinery and equipment during maintenance and servicing, significantly reducing the risk of electrical injuries and fatalities in the workplace.

Electrical accidents remain a serious concern across various industries. According to OSHA, electrical hazards cause hundreds of deaths and thousands of injuries each year. Proper lockout/tagout (LOTO) procedures, particularly for electrical systems, are paramount to ensuring the well-being of employees and maintaining a safe operational environment.

Pinnacle Safety Products' electrical lockout devices are engineered for durability, ease of use, and compliance with stringent safety regulations. All products are universal and accommodate all equipment brands. The expanded product range includes:

- **Electrical Panel Lockout Device:** The PS1 provides an effective lockable mechanism on any panel door, preventing unauthorized access and safeguards personnel and equipment from potential hazards.
- **Med/Lg Circuit Breaker Lockout:** The PS2 provides an effective lockable mechanism on, or adjacent to medium and larger frame circuit breakers, preventing unauthorized closing of the circuit breaker.
- **Electrical Enclosure Lockout Device:** The PS3 is a crucial safety warning device for workplaces with electrical panels, junction boxes, wireways and other enclosures for qualified personnel. It effectively locks panel doors, and other enclosures to prevent unauthorized access. The PS3 can be used on flat surfaces or can be inverted at 90 degrees inward or outward for hinged junction boxes or wireways.

"At Pinnacle Safety Products, our mission is to provide top-tier safety solutions that protect workers and optimize operational efficiency," said Charles Vance, President and CEO of Pinnacle Safety Products, LLC. "Our enhanced line of electrical lockout devices underscores our commitment to this mission. We understand the critical importance of preventing electrical accidents, and these products offer reliable, robust warning devices that businesses can trust to safeguard their most valuable asset – their employees."
