

PRAYS CITRI TDS

Description:

Pheromone attractant for: *Prays citri* for monitoring and mass trapping purposes.
Inert ingredient(Carrier): Rubber septa impregnate with Z7-12:Ald

Longevity:

4-6 Weeks once opened.

Packaging:

Each lure consists of a minimum of 3 mg of a mixture formulated in slow release system and hermetically packed in impermeable aluminum package. Direct contact with full strength liquid is not possible if product is used as directed.

How to use:

Open wrapping immediately before use. Place in the center of the trap (following trap manufacturer instructions). Do not place lure unprotected in direct sun. Dispose of the wrapping away from the monitoring area.

When to use:

Before the emergence of the first generation and until the end of the season.

Suitable trap:

Delta trap

Trap position:

Near the highest point of the stored products using supporting posts, approximately 0.5-1-meter high.

Trap density:

For monitoring, 2-3 traps every 1 hectare.
For Mass trapping, 20-30 traps per hectare.

Data interpretation:

Decisions on pesticide application should not be taken solely on the trap catch data. Climatic and biological considerations should be taken in account.

Pheromones(lures) should be stored in a cool, dry place. It is recommended that pheromones be refrigerated to prolong the life of the product for over 12 months.

Replacement:

Replace every 4-6 weeks or as recommended by the agricultural authorities.
Remove the old lure and dispose of away from the monitoring area to avoid interference with monitoring program.

Precautions:

Handle carefully. In compliance with the Instructions for Use, this substance is not harmful to humans and the environment.
