### **Dr. Warren D. Allmon**

Warren D. Allmon is the Director of the Paleontological Research Institution (PRI) in Ithaca, NY and – since 2008 -- the Hunter R. Rawlings III Professor of Paleontology in the Department of Earth and Atmospheric Sciences at Cornell University. He earned his A.B. in Earth Sciences from Dartmouth College in 1982, and his Ph.D. in Earth and Planetary Sciences from Harvard University in 1988. He became PRI's fourth Director in 1992. Since then, he has been instrumental in rejuvenating PRI's internationally-known fossil collections; starting its local, regional, and national programs in Earth science education; and in planning and fundraising for the Museum of the Earth, PRI's \$11 million education and exhibit facility which opened in September 2003. In November 2004, Allmon helped secure a formal agreement of affiliation between PRI and Cornell, ending more than 70 years of official separation.

Allmon is the author of more than 300 technical and popular publications. He is a Fellow of the Geological Society of America and the Paleontological Society, and was the recipient of the 2004 Award for Outstanding Contribution to Public Understanding of Geoscience from the American Geological Institute.

### **ABSTRACT**

“Paleontology is sometimes thought of as just dinosaurs, or dead fossils. But paleontology is the only record we have of the actual history of life on Earth, and therefore the only test case available for judging the potential effects of present and future environmental change – including climate change -- on Earth's biota. The past is not just past. It is a crucial source of data for predicting, and preparing for, the future.”
