

THE USE OF VETIVER GRASS TO IMPROVE SUSTAINABLE AGRICULTURE IN THE VIRGIN ISLANDS

Vetiver grass is a non-invasive tropical grass that is used worldwide.

Erosion Control

Used for the management of erosion and water conservation, for slope stabilization, and for land and water remediation

Water Conservation

Pond Stabilization

Erosion and Water Management

Protecting Roads

Attend a presentation on the uses for the Vetiver System to improve agriculture in Virgin Islands including:

- Erosion control.
- Water conservation.
- Slope stabilization.
- Protection of roads and ponds.
- Water remediation.

And apply for an on-farm workshop to learn how to maintain and propagate the grass and to obtain free plants to use on your farm.

DATE: Saturday, November 23rd

Time: 11:30 am

Where: Giff Hill School

ZOOM will be available

Please email Laura Martin at lm6419@aol.com if you plan to attend by ZOOM for the link Supported through a Grant from Southern SARE and a USVI Climate Change mini-grant
