

MY EXPERIMENT TITLE

Date: Month/Year

Author Name

ABSTRACT

- Give a short summary of your experiment
- Try and keep it to 250 words or fewer
- This allows the reader to determine whether they should continue reading

INTRODUCTION

- Provides the reader with the problem you were facing
- What was the question you asked, or the observation you saw?
- Give some background information surrounding the paper topic
- Establish the goal of your experiment and this paper

METHODS & MATERIALS

- Describes and justifies how the research question was answered
- Details the means of data analysis for the reader
- Explain what equipment was used (acoustic or electronic drum kit)
- How often you played/practiced, duration of sessions (e.g. 20 min sessions, three times a week)
- Duration of your experiment (e.g. 8 weeks)
- What songs you practiced to, your tempo/BPM

RESULTS

- Presents the experimental data without interpretation
- Compare your before and after scores from the assessment questionnaire
- Summarise your findings in-context using tools like tables and graphs

DISCUSSION

- This is where you interpret the results of your experiment
- Did you see the benefits you expected?
- Document the significance and the limitations of your experiment research
- Make suggestions for next steps (maybe someone else will conduct their own experiment)

CONCLUSION

- Here is where you wrap up your ideas and summarise all of the data
- Share your findings on our [Resonate page](#) so that others may benefit from your experiment
