

# Coastline Supply, LLC

## Who We Are

With over 40+ years of importing, Coastline Supply LLC is proud to offer a diverse selection of protective masks serving different purposes and holding different certifications. Currently Coastline Supply, LLC sells KN95 masks (GB 2626-2006) and 3 ply face masks (GB T32610), both imported from China. Our masks meet or exceed all applicable standards for said masks.

These surgical masks can be customized with colors, logos, etc. There may be an additional cost depending upon the level of customization requested. We can also provide customized packaging. This may involve additional costs depending upon the packaging requested.

In response to the concern regarding the quality of masks manufactured and shipped from China, the Chinese government has implemented specific, strict requirements before masks can be exported to countries like the United States. These requirements include the following:

- Each shipment is manually inspected, and random masks are tested to the appropriate quality standard (GB2626-2006; GB T32610; etc.);
- The manufacturer must provide a product Test Report;
- The quality standard (GB2626-2006; GB T32610; etc.) must be listed on the Test Report;
- The manufacturer must provide a Certificate of Conformity matching the Test Report;
- Each inner package must contain one Certificate of Conformity.
- Filter performance on masks are **testing at  $\geq 97\%$**  for BOTH 3 PLY and KN95 masks.

## KN95 Masks (Chinese standard GB 2626-2006)

These KN95 masks reduce the WEARER's exposure to particles including small particle aerosols and large droplets (only non-oil aerosols). They are tight fitting and filter out at least 95% of airborne particles including large and small particles. Both the United State N95 standard and the Chinese 2626-2006 standard require at least 95% filtration; some KN95s have been approved under emergency directives for medical use. While the KN95 masks sold by Coastline Supply, LLC. meet or exceed the GB 2626-2006 standard, they have not been approved for medical use. These masks are disposable, one use, and should be discarded after one use or if damaged.

## Facemasks (3 ply)

These facemasks usually have ear loops for wearing and are loose fitting. They are fluid resistant and provide the WEARER protection against large droplets, splashes, or sprays of bodily or other hazardous fluids; they protect OTHERS from wearer's respiratory emissions. These facemasks do NOT provide wearer with a reliable level of protection from inhaling smaller airborne particles and are not considered respiratory protection for the wearer. They are disposable, one time use, and to be discarded after each use and if damaged.
