

## Procedure to replace the Control Panel

1. Just inside the mulch chute to the left you will find a white panel with (4) ½ inch flange nuts, newer units will only have two nuts. Remove the (4) nuts to exposure control panel connector.

2. Gently pull back the black clip and separate the connector from the control panel above the “SEPD” module. Remove the four #30 Torx screws on the control panel and replace the control panel. Reconnect the harness until it clicks in place. It can only go in one way. Test unit by turning on power, activate to get 2 green lights and press down on the joystick. When you press joystick you should see

conveyor run for 2.5 seconds then tarp roller will come on for 1.5 - 2 seconds. Release the joystick.

3. Replace the white inside cover with (4) nuts.
