MORE THAN A GAME

ECCO, THE BRAND

From humble beginnings in Bredebro, Denmark, our family business, established in 1963 to make original design for a better life, has evolved into a modern global lifestyle brand.

Our design philosophy is Danish to the core. Whatever the shoe, the purpose is living well. We don't just dream of a brighter future – we are working to make it happen. We always believe in putting people first. Our family-driven values direct our growth, and we are proud to be a brand that puts shoes on the feet of everyone in the family.

ECCO GOLF & INNOVATION

At ECCO GOLF, we've been pushing the boundaries of golf footwear for nearly 30 years, since introducing our first golf shoes in the mid-1990s. We believe in people, their stories, and their passion for the game—and for us, golf is more than a sport, it's a way of life. Built on our shoemaking expertise, we craft premium golf footwear using high-quality materials from our own tanneries and produce them in our own factories, ensuring exceptional durability, flexibility, and comfort.

Innovation is at the heart of everything we do. We pioneered the hybrid golf shoe revolution, helping shift the game toward spikeless designs that are now trusted worldwide. By continually challenging convention and redefining standards, we create shoes that feel like a second skin while delivering unmatched performance—shaping the future of golf footwear step by step, shoe by shoe.

OUR LEATHER

Since 1985, we've produced our own premium leather in ECCO-owned tanneries, earning a reputation for softness, durability, and quality—especially important in our golf footwear. We continue to innovate with advanced treatments that enhance performance, breathability, and protection, including our DriTan™ technology, which significantly reduces water usage. Looking ahead, we aim to manufacture 100% of ECCO GOLF shoes using DriTan™.

We're also committed to responsible manufacturing and industry progress. As a Leather Working Group (LWG) member since 2010, all four of our tanneries are LWG Gold-rated and regularly audited for environmental performance. Through these efforts, we continue to drive innovation while advancing transparency and sustainability in leather production.

SUSTAINABILITY

We established our first Code of Conduct in 1990, built on three core commitments: social responsibility, environmental care, and economic viability—principles that still guide us today. Sustainability is embedded across everything we do, from design to manufacturing, with a focus on reducing resource use, extending product life, and increasing recycling. We also invest in innovations like our FLUIDFORM™ technology, which creates durable, flexible shoes without glue or stitching.

We've set clear goals to drive progress, including recovering 90% of waste by 2026, achieving energy neutrality by 2028, and reaching net zero water discharge by 2030. With initiatives like DriTan™ already reducing water and chemical use, we remain committed to improving efficiency and leading more sustainable practices across the footwear and leather industry.

FEATURED TECHNOLOGIES

BIOM®

BIOM® has long been the foundation of our performance golf footwear, designed around the natural shape and movement of the human foot. By following the body's biomechanics, BIOM® delivers a fit that works with—not against—the golfer, supporting comfort, stability, and freedom of movement. At its core is an anatomically sculpted last, developed through foot scanning and pressure mapping to mirror the foot's natural position throughout the swing.

Built on a low-to-the-ground design, BIOM® enhances ground feel and connection, helping golfers stay balanced, generate power, and move with confidence. Paired with our E-TTS® outsole for multi-directional traction, it provides stability without restriction. The result is a naturally grounded feel that allows golfers to trust their footing and perform at their best.

FLUIDFORM

Developed by ECCO over three decades, FLUIDFORM™ is the technology that enables us to create our ergonomically advanced soles. This ground-breaking technology is unique to ECCO GOLF in the golf industry and has enabled us to create durable and reliable golf shoes.

Utilising robotic precision, the pioneering technology allows a resilient, shock-absorbent material to be directly injected into the shoe mould, bonding the sole to the upper instantly and seamlessly, without compromising flexibility and wear common with glued or stitched assemblies.

The result is a reliable, watertight and durable connection between the upper and the sole unit that delivers a finely-tuned balance of cushioning and rebound.

WATERPROOF

ECCO-TEX

ECCO-TEX is our advanced in-house waterproofing technology, introduced to set a new standard in golf footwear protection. Built around a high-performance membrane, it creates an impermeable barrier against rain while maintaining breathability and comfort. As an evolution of our long-standing waterproof expertise, ECCO-TEX allows golfers to stay dry and focused, delivering reliable protection from the elements without compromising performance.

GORE-TEX SURROUND

We also partner with GORE-TEX, an industry-leading external technology, to provide 100% waterproof protection with 360° breathability. Through GORE-TEX SURROUND construction, moisture escapes not only through the upper but also through the sole, supported by our T.PU EXHAUST GRID, which channels airflow underfoot. This combination ensures continuous ventilation and climate comfort, keeping feet cool, dry, and performing in all conditions.

BOA

The BOA® Fit System delivers customizable comfort in our ECCO GOLF shoes, offering a smooth, even closure with no pressure points. Lightweight, durable laces made from Dyneema® and polyester can be quickly adjusted with one hand, while the dial and laces are guaranteed for the life of the shoe. In our latest collection, select styles like the BIOM® H6 feature the advanced Li2 dial for precise, incremental adjustments, enhancing fit and performance.

DUAL-FIT INSOLES

Removable performance insole for long-term cushioning and breathability, with the option of taking it out for extra width

ECCO's natural motion concept

Quick-closure tension lace system

Soft and lightweight ECCO PHORENETM midsole

ECCO DYNAMIC TRACTION SYSTEM® – consists of 100 molded traction bars for 800-plus angles of traction

Sole with multi-directional traction and slightly larger cleats in high-abrasion areas

100% waterproof GORE-TEX membrane
PFAS free

New article or color to the collection

100% waterproof GORE-TEX with increased breathability
