

STOP BOILER DAMAGE

REPLACE THAT TROUBLESOME RELIC THE MAKE UP WATER BALL-FLOAT VALVE

BIG SOLUTIONS IN A LITTLE BOX

REDUCES
BOILER AND
PIPEWORK
DAMAGE
caused by
metal
destroying
carbonic acid

REDUCES
SCALE BUILD
UP
by preventing
the dilution of
boiler
compound in
the return tank

EASY
INSTALLATION
all parts
included

2 YEAR FULL
PRODUCT
WARRANTY

\$695*

ELECTRONICALLY CONTROL RETURN TANK LEVEL

*24 volt AC solenoid required

BIG SOLUTIONS IN A LITTLE BOX

**STOP
ACID INDUCED
PIPE CORROSION**

**REPLACES THE
BALL-FLOAT
VALVE**

The EZ LEVEL prevents premature piping failure as well as boiler scaling by replacing that troublesome relic, the ball-float valve. The ball-float valve maintains the level of water in the return tank. Ball-float valves are known for failing open which allows fresh water to continuously leak into the return tank. This fresh water contains lots of free oxygen which combines with carbon dioxide to create carbonic acid. Carbonic acid destroys pipework and boiler internals. In addition this continuous leakage of fresh water dilutes the boiler compound resulting in scale formation.

**STOP
CORROSION INDUCED
STEAM SYSTEM CLOGGING**

**STOP
BOILER SCALING CAUSED
BY DILUTED BOILER
COMPOUND CONCENTRATION**

**LOAD OF SCALE AT
THE OPEN HAND HOLE
ON A TUBELESS BOILER**

**TOTALLY BLOCKED BOILER
TUBE THAT ACTUALLY
RUPTURED DUE TO
OVERHEATING**

**BUILD UP OF SCALE
BEHIND PUMP IMPELLER**
