Founder's Remarks

Dear Development Leaders,

This marks the **third year** of our journey at Samprabhav Foundation. Registered as a Section 8 company, our sole purpose remains steadfast: building resilient communities and organisations for the betterment of humanity. Each year has brought new lessons, and this year we focused on strengthening foundational learning while expanding our work to address pressing environmental challenges.

We deepened our efforts to improve learning outcomes for primary school children. Using the **Accelerated Learning for All (ALfA)** methodology, we made measurable progress in **Foundational Literacy and Numeracy (FLN),** setting the stage for scaling across schools.

Recognising India's position as the world's third-largest producer of electronic waste, with most of it handled by the informal sector under unsafe conditions, we ventured into the **Responsible E-waste Recovery Program** (e-waste recycling awareness & collection). With only 400+ certified recyclers in the country, the lack of knowledge about proper disposal methods remains a critical gap. To address this, we launched an extensive awareness program targeted at the young generation, aiming to create generational change in disposal practices. So far, we have reached **6857 participants**, including students, teachers, and community members.

This year, we have an exciting development: we partnered with **rePurpose Global,** the world's leading plastic action platform. We are implementing a **Responsible Plastic Recovery Program now in two states – Karnataka and Andhra Pradesh, and also in the Union Territory of Puducherry.**

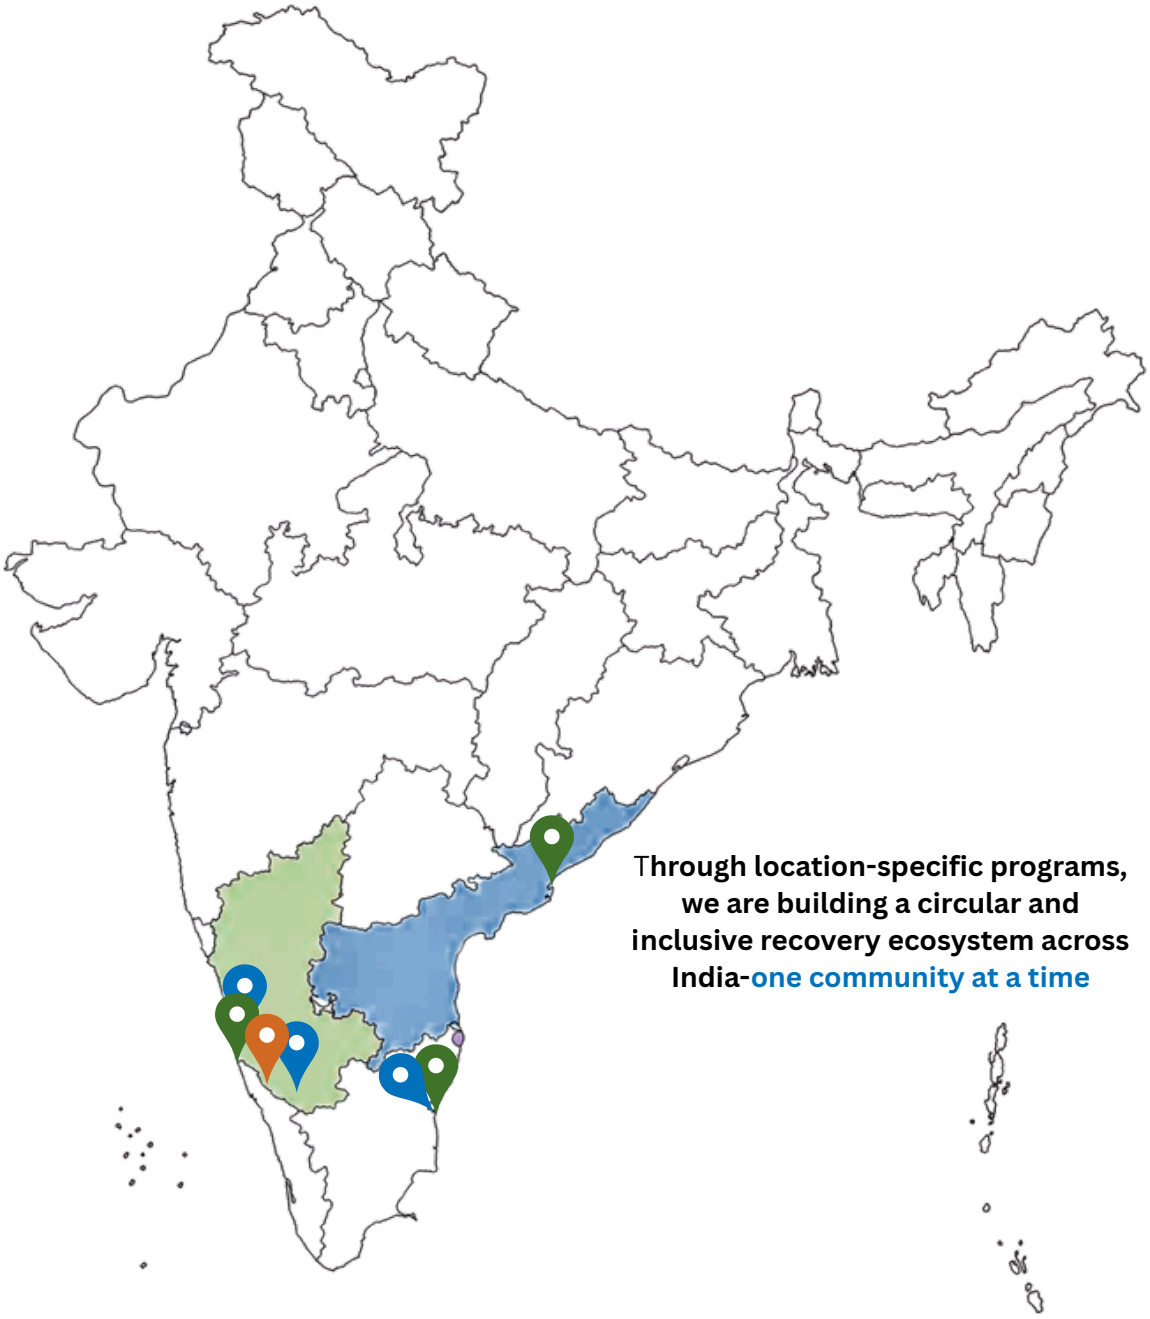

Infusing environmental concern in the population is our commitment. We extended this from the western forests of Karnataka last year to the eastern coasts this year, where 50+ volunteers joined us in a beach clean-up drive in Andhra Pradesh. We prevented 1500Kg of plastic from getting into the ocean and affecting the marine ecosystem. We also recovered **21 million bottles of plastic waste,** which otherwise could have landed in the ocean or landfill

These combined efforts reflect our evolving **focus-education, climate action, and circular economy interventions**-broadening our realm of influence toward the holistic development of underserved communities.

As we step into the new year, we remain optimistic and determined. **Strengthening foundational education, advancing climate change initiatives, and pioneering circular economy** solutions will continue to guide our mission of contributing to a better society.

Together, we build resilience.

Responsible E-Waste Recovery Program

With a vision of creating informed and community-managed sustainability spaces, Samprabhav Foundation, in collaboration with **Karo Sambhav** (a pioneer in building the circular economy movement), initiated e-waste awareness and action programs in the southern India region. This is a positive partnership where enterprises, consumers, and governments collaborate to enable the circular economy. Awareness sessions were the mainstay of this program. We reached out to academic institutions and community spaces, such as apartments and business spaces, including malls in **Mysore, Mangalore, and Puducherry.**

From August 2025 to March 2026, **94** sessions were conducted across the three locations. A total of **6857** participants were reached through awareness programs.

The purpose of the initiative was to create awareness among students and the adult population, **enabling them to dispose of e-waste responsibly and cause minimal harm to the environment.** The awareness sessions were conducted in government and private schools, colleges, and training institutions.

Awareness materials used during the awareness sessions

A few session pictures

The project directly addresses Sustainable Development Goal 12: Responsible Consumption and Production, specifically addressing target
12.4 – Responsible management of chemicals and waste and target
12.5 – sustainably reducing waste generation.

Responsible Plastic Recovery Program

As part of the **Reuse-Recycle-Reduce** philosophy, Samprabhav Foundation collaborated with **rePurpose Global,** A leading plastic action and packaging sustainability platform that helps companies measure, reduce, and offset their plastic footprint. Under this program, **four plastic recovery, sorting, and baling facilities** were established in Visakhapatnam (Vizag) in Andhra Pradesh, in Puducherry, and in Mangaluru in Karnataka.

All the Plastic Recovery Centres were fully **operational in January 2026.** As of January 2026, 40 scrap shops are working under these centres and providing recyclable plastic material. This number increased to **110 shops** in March 2026; thus, we are now sourcing plastic from a total of 110 scrap shops. Apart from the plastic recovery, as part of **social responsibility,** we also implemented the following activities for the centre & scrap shops:

- Fire and Safety Training
- Basic Accounts and Bookkeeping
- Hygiene and First-aid Training
- Basic Health Camps
- Financial Literacy
- Scrap Shop Development Fund
- Infrastructure Development

Fire and Safety Training

Fire and safety training was provided to all workers at the scrap shops to equip them with essential knowledge on fire prevention, safe handling of hazardous materials, and proper use of fire extinguishers. This training aimed to minimise risks and ensure a safer working environment for everyone.

Basic Accounts and Bookkeeping

Basic accounts and bookkeeping training was conducted for the owner & workers of the scrap shops to help them maintain accurate financial records, track daily transactions, and manage shop expenses effectively. The training focused on building fundamental skills in simple accounting practices to improve transparency and business efficiency.

Hygiene and First Aid Training

Hygiene and first aid training were imparted to the workers at scrap shops to promote personal and workplace cleanliness while enabling them to handle minor injuries and medical emergencies confidently. The session emphasised the importance of maintaining high hygiene standards and basic life-saving techniques in the scrap shop environment.

Basic Health Camps

A basic health camp was organised for the workers working at the centre & scrap shops, providing free health check-ups, blood pressure and sugar testing, and general medical consultations. The camp aimed to assess their health status, create health awareness, and ensure early detection of common health issues.

Financial literacy

Financial literacy training was conducted for the workers at the scrap shops to educate them on basic money management, savings, budgeting, and the importance of avoiding unnecessary debt. The session helped participants understand how to make informed financial decisions and improve their overall economic well-being.

Scrap Shop Development Fund

As part of the scrap shop development support, INR 2,000 per month was allocated for 6 months to each scrap shop. This financial assistance was provided to help improve infrastructure, working conditions, and overall operations at the scrap shops.

Infrastructure Development

The capital expenditure at all locations included the establishment of a conveyor belt, the sorting facility, a baler machine, a weighing scale and a stacker; it also included the purchase of a vehicle and the rental of the location.

The facilities were also equipped with fire and safety systems, compliance sign boards, recycled panel office and other essentials. The staff recruited were further trained in sorting and baling and fire and safety training.

Revive Kodagu

Kodagu's breathtaking landscapes draw visitors from all over, but this heavy footfall often brings a less welcome guest: plastic waste. To protect Kodagu by reducing plastics our Revive Coorg campaign joined hands with the local Tourism & Forest Department. We wanted to make doing the right thing as easy as possible for both locals and visitors.

Working together, we mapped out the district's busiest routes to pinpoint the exact hotspots where dedicated waste collection bins were needed most. For us, this isn't just about placing bins—it's about initiating a shared community effort to keep Kodagu beautiful, pristine, and plastic-free.

Our Team

At Samprabhav Foundation, we are not just a team-we are a movement of changemakers driven by a relentless commitment to transform communities and restore our planet. United by passion, expertise, and purpose, our professionals bring deep experience in sustainability, environmental conservation, circular economy, education, and social development to challenge conventional approaches and create bold, scalable, and lasting solutions.

Every milestone we achieve is powered by the dedication of our team, field champions, and community partners who work beyond boundaries to turn vision into action. With courage, innovation, and an unwavering belief in the power of collective action, we continue to push the limits of impact, creating self-sustaining communities and building a greener, more equitable future for generations to come.
