Introduction

Football betting systems do they work and how to make them pay.

If you want to be effective with soccer gambling techniques, you cannot expect to use a system for a week or two, analyse it then stop using it as soon as results don't go your way. You would be amazed how many football bettors only use a football gambling system for a brief while. These are the kind of punters who usually start with unrealistic profit expectations.

They have purchased into the marketing buzz. If you want to be effective with football gambling techniques, you cannot give a system a small test run then jump ship soon as results don't go your way.

They have purchased into the buzz and now they are anticipating converting a very little sum of cash into a very huge sum of cash. Certainly when those outcomes don't appear they are fast to call the system they were using a fraud. Calling something a fraud doesn't create one. These individuals might have actually had an effective soccer gambling program, but they do not have the self-discipline to stick with it

When you purchase any football method for it to be effective, you must stick with it. What I mean by this is as soon as you start to get on a losing run, you cannot let anxiety creep in and stop using the system. You cannot basically say that you are going to use some other programme because you have hit a bad run. Whatever gambling technique you use it is going to have some bad losing streaks

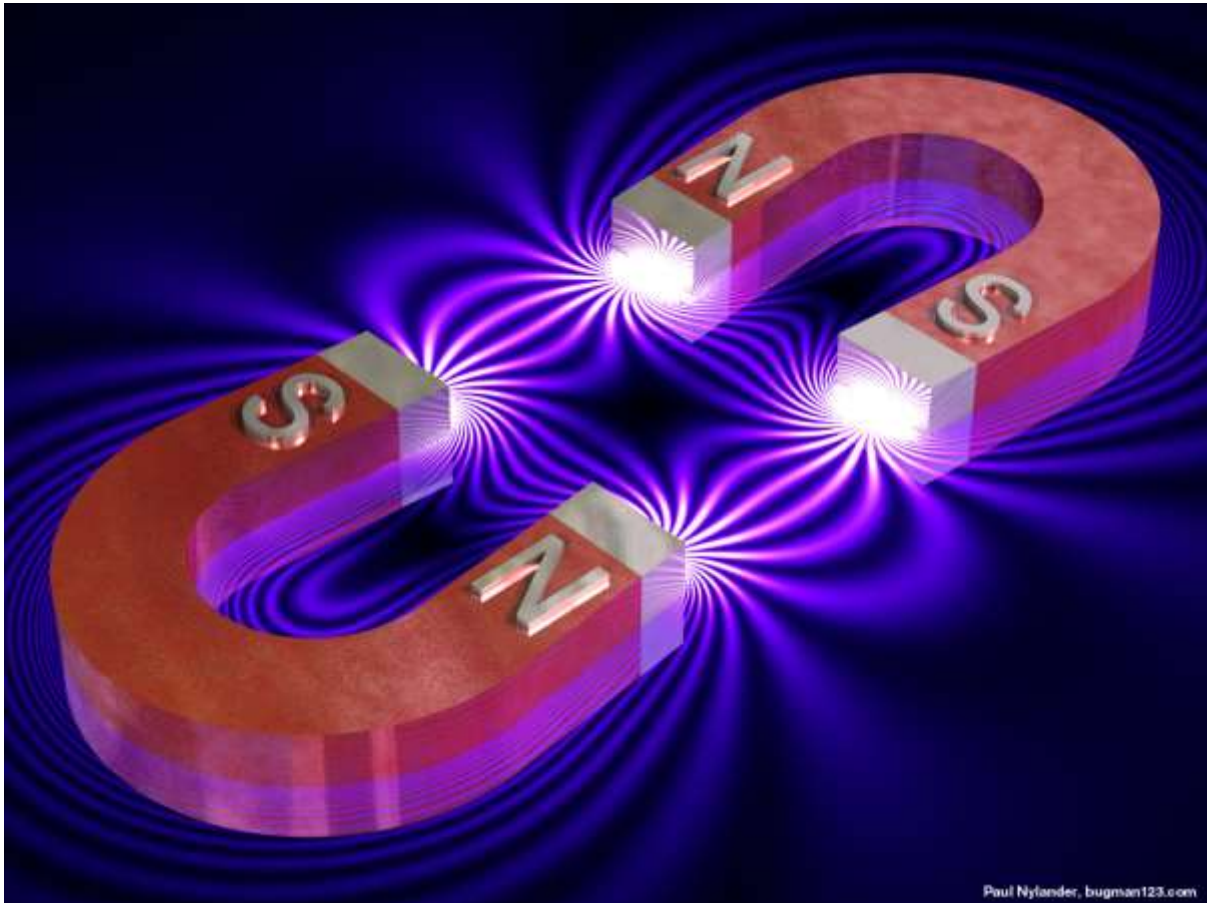

An efficient football gambling system must be developed to create you profit over the long run. Even though bad runs are going to occur, you will profit if

you have enough of a betting bank to keep with it. However, if you are not regimented with your staking plan you will soon lose your betting bank. This is why you must be regimented, and you must also adhere to an efficient staking plan.

Those who don't have self-discipline and do not have a decent money management technique are those who will begin to reduce their stakes when a bad run happens. You definitely cannot hope to be a winning punter doing things this way. A soccer gambling system that is well developed and tested must have a punter who offers the self-discipline and persistence to stay with it.

This is what will allow you to be more efficient over other punters who are only looking to create some fast cash. Those kinds of punters usually end up losing their money very easily.

Football Power Ratings

An Effective Betting Approach, which has been Profitable over 15 years for its Shrewd Followers

Introduction

All forms of investing or gambling must have a sound basis for correctly assessed predictions if it is to be profitable over the long term.

Gambling at football online or at your local bookmakers, can be risky but remains one of the few forms of betting that gives the informed punter a real chance of making an excellent profit.

The only reason most bookmakers survive is mainly down to the haphazard way most of their clients approach betting.

It is not too difficult to make sure you are one of the few winning punters if you are prepared to put in some effort.

This rating` s system directs you to the profitable bets that can be exploited for your gain.

Our old enemy the bookmaker will always continue as it is the chancers and guessers who keep them in business.

By using this unique rating` s system you are at least giving yourself a fair chance of making sure you are one of the 2% of punters who make money from football betting.

This unique rating system offers you the chance to assess each football team's form and to produce your own simple but accurate ratings

Any daily newspaper or specialist paper can be used to operate this method. You only need each team's last three result.

This method originated from a method devised over 30 years ago by one of the first professional punters, and as far as I am aware the method has been in constant use by a few fortunate people since its introduction all those years ago. I believe that this rating system has more than stood the test of time!

The rating system has only ever passed on by word of mouth; in fact any interested parties were invited then at the sole discretion of the originator of the plan, along a series of presentations, paying a huge fee for each session.

They were very successful and these very fortunate people who attended went on their way armed with their new found knowledge and beat the bookmakers for many years to come.

Match Predictor

This method will guide you in the right direction as regards selecting win single football matches to back at value prices. This method uses a simple points system for the last three results of any team you are looking to back.

Once you have calculated the correct point total for both teams in any particular match, then you have to look at the chart below and seek out the match forecast.

Points given for the last three results

WIN = 3 POINTS DRAW = 2 POINTS LOSE = 1 POINT

Example:

Liverpool (won, won, won) $3+3+3 = 9$ **points**

Arsenal (won, won, draw) $3+2+2 = 7$ **points**

If Arsenal were the home team then looking at the chart we find the match forecast as a draw first then next best an away win.

See the next page for Match Forecast Chart.

Summary

You can predict the outcome to every match on the coupon using this very accurate forecast chart. If you would like to back professionally the **1= home wins and 2= away wins** have a very high strike rate and have shown a very healthy level stakes profit every year since 1996 and will continue to do so for as long as you wish to use this forecasting method.

To be even more accurate only bet in premiership matches and wait until 8 weeks into the season and stop betting 8 weeks before the end of the season.

Good Luck

***How To Make an Easy £100
in profit Every Weekend with
this simple football bet that
takes minutes to place!***

The rules

This banker bet has been the work of five years and is truly one of the only bets you should ever consider because it has the best return rate I have ever seen.

The format of the bet is called a trixie (I'm sure most of you will be aware of the bet but for those who are new to the game I shall explain).

The trixie consists of three teams and four bets (the four bets are three doubles and one treble). You must cover the four bets with an equal stake, for example a £5 trixie would cost £20
4 bets x 5.

This bet will work with any bookmaker who is prepared to offer you odds on a football match from top-flight English Football to the second division in Spain.

Rule No. 1. You must pick **three away teams**

Rule No. 2. Those teams must be **ODDS ON.**

Example

Away team a) Price 8/11

Away team b) Price 10/11

Away team c) Price 4/6

If all three teams win with a stake of £600 (£150 x four bets), the return would be £2229.75. (Not bad for ten minutes work!!)

If only two teams win the return would be £495.

The chances of two teams or more losing are very remote but you should be prepared for the fact that from time to time this will happen.

The security of the bet is that if one team fails to win but the other two do, you receive most of your cash back. I would not recommend gambling in the region of £600 because I am very experienced and have full faith in the system. You should start on paper first which in turn will give you the confidence to lay larger bets. Remember, do not become greedy, a £5 trixie (£20 bet) with similar odds would return in the region of £80 - £100.00.

The Sun newspaper is very good for match odds and don't be concerned that one bookmaker's prices are better than another because over the course of a season, they tend to even themselves out.

Never lay more than one trixie, if there is more than three teams odds-on away from home, you must still lay one trixie, choose the best odds and look at the form of those teams to determine which your three selections will be.

You must also remember that a 1/7, 2/7 and a 2/5 will almost always win but your return will be very small, always attempt to get as close to even money without actually reaching it, like, 4/5 and 10/11.

My final point is on rare occasions you will not be able to find three odds-on away teams you must leave your money in your pocket until next time, never try and force the issue with one even priced team and two odds-on. IT WILL NOT WORK LONG TERM!!!!

Remember

Mix and match your bookmakers with shops and online because as you start to win serious money, you will not be very popular with the manager and he may ask you to take your business elsewhere, so use online accounts to even out the load.

The season so far.....

I have made just over £14,000 profit after 15 bets have been placed. Two of those completely lost. I mainly use midweek and weekend English football, plus a little Scottish when needed.

TIPS

- Never gamble more than you can afford
- Do not become too greedy (remember a £10 trixie, £40 bet, will pay well over £100 in profit.)
- You must always pick away teams that are odds on
- If there are not three away odds on teams then there is no bet.
- You do not have to use just English football. You can use any league in the world that is accepted at the bookies.
- With a 70% + success rate, you do not have to go outside the conditions of the bet to win consistently large amounts of money.
- Picking large odds on prices will never generate impressive profits.
- Never gamble for the first eight weeks of a season because you get all sorts of strange results.
- Remember, if you're whole bet goes down, keep the rest of your money for another time.

*How I turned £200 into
£3,790 in 7 days thanks to
Bookmakers Roulette
Machines*

Thank you for giving me the opportunity to share with you my amazing roulette winning strategy.

In this document you will discover a very powerful strategy, that I use it very often at the bookmakers or online roulette machines

Let's get started:

BASICS: My Strategy covers numbers all around the wheel with only 5 chips.

Step#1:

Bet one chip on the six number combo "31-36." If you don't know how to do this, ask the dealer and he will do it for you. Next place one chip on each of the following numbers: 11 - 12 - 27 - 28
You now have a total of 10 numbers covered with an outlay of only 5 chips. If you look closely to any roulette and check out all your numbers above, you will have the "roulette" wheel covered very nicely.

Most of your numbers are not more than three and some even two numbers apart giving you a greater chance to win every time the ball drops down.

Step#2:

If the ball lands on "31 to 36" you receive "5 to 1." You get five chips and the one you place stays there giving you a profit of one chip. And you're up again to win.

Step#3:

If the ball lands on any single number you get 35 chips and the one you place there stays. Giving you a nice profit of 31 chips and you are up again covering all 10 numbers again.

Step#4:

Each time you hit your six number combo bet your same numbers and 2 chips on the six number combo with your one chip profit. If the six number combo hits with 2 chips. You now have a 6 chip profit. Each time it does add one chip to the six number combo only. When a spin does not produce a winner go back to the original 5 chip bet.

Step#5:

If a single number hits, you will have a 31 chip profit. When this happens add one more chip to all 5 bets and do this for as long as you keep hitting single number bets. On any lost go back to the original 5 chip bet. You can increase your bets only on previous wins.

This is a reliable betting strategy and will give you lots of action for little money. And some days some big wins when the ball drops your way.

One more important note. Do not play too long at any one machine. In doing this no one will know what you are doing.

Have fun by making thousands at the wheel,

Each-way value

Rules:

In any race with five declared runners, place an each-way bet on the second-named horse in the pre-post betting market.

In cases where a subsequent non-runner is declared the bet stands as win-only for system purposes (this provision is made on the basis that bets are often placed early in the day).

Staking:

Bet each-way on each selection.

Logic:

A carefully researched 20/1 shot is only equivalent to a 2/1 winner when placed second or third in an eight-runner race, giving very poor value (a one-point each-way stake would return six points at one-quarter odds, making it equal to a 2/1 win).

Contrary to popular belief, the best value for each-way backers is found in races of five runners, where the return for a place is one-third odds. Importantly, the two places in a five-runner event account for 40 per cent of the total (as against 37.5 per cent for the three places in an eight-runner race).

Not generally understood is the fact that each-way betting is more effective at lower prices. The missed profit on winning long shots is never compensated by the poor place returns for those that are narrowly beaten - big prices are always better backed as win-only in the long term.

In races of five runners, the each-way value is often found with the second horse in the pre-post betting market. It holds a realistic chance of winning, whilst also being expected to beat the other three home, thus saving well over 50 per cent of the total outlay when beaten into second place.

*HOW I WON OVER
£32,000 USING A
SECRET CORRECT
SCORE PREDICTING
METHOD*

The football season is here again and we are aging to show you some of the best opportunities for pocketing regular cash at your bookies expense. Follow any of this expert system and you will generate regular wins with the occasional massive pay-out!

You can use any level of staking you feel comfortable with but for ease we have used £1 stakes.

Rules

This involves finding five matches, which you expect will be close home wins. Only two need results as predicted to generate a good profit for you – and if three or more come good you can look forward to a hefty three figure pay-out on our recommended stake.

You can use and selection method you wish to select your home games but we have had the most success choosing home matches priced in the 8/11 to 10/11 price range.

Start from the premiership on your football coupon and work down until you come to the first five matches in this range.

Example of how you should write out your betting slip

ARSENAL V LIVERPOOL 1-0

CHELSEA V ASTON VILLA 1-0

MAN UTD V EVERTON 1-0

NEWCASTLE V MANCITY 1-0

PORTSMOUTH V FULHAM 1-0

10 X £1 DOUBLES

1 X £1 ACCUMUATOR

STAKE £11

The odds for a 1-0 result (statistically the most common score) are around 7/1, so if two matches have this scoreline you'll receive £64.

If three matches end up as 1-0 home wins, you'll have three winning doubles, giving you £192.

If four come up, your winnings will be £384

While if all five do the business you will be £33,408 richer! You will have £640 to come back from your doubles and £32,768 from your accumulator.

Conclusion

Start with small stakes even as low as 10 pence if you wish and you will find as the weeks go by you will get a lot of nice returns on two or three winning home wins whilst you are waiting the life changing all five to come in. You will only need one full correct score and you will be laughing.
