of rack
protection

Always on guard

Contoured shape, slim profile

Featuring round edges and a slimmer profile the Rack Sentry CONTOUR increases the rack clearance available to forklift drivers navigating narrow aisles. The more clearance, the less chance of tagging the rack protector or upright. Sculpted sides add ease the installation and removal process for rack inspection.

Forklift impact damage leads to pallet rack damage, costly repairs, downtime, damaged inventory and injury to workers. And here's the thing. Damage from forklift impact is the number one reason that rack systems fail. The best way to prevent rack damage is to protect the racks.

The best way to protect the racks is with the Rack Sentry CONTOUR. Along with the original Rack Sentry, tested to outperform all other energy-absorbing rack protectors.

Exclusive Sentry cut-out

All sizes of the CONTOUR feature a cut-out designed to accommodate horizontal beam installations. One way it fits beams five inches off the ground; flip it and it fits beams seven inches above the ground. The cut-out feature is exclusive to the Rack Sentry CONTOUR and the Rack Sentry.

**Designed to
fit over
beam
connector
hardware**

Tapered arms

Four tapered arms on the Rack Sentry CONTOUR (two on the top and two on the bottom) reduce the rear face of the rack protector by more than 90 percent. These hinged arms are removable for maintaining a strong, secure fit when protecting half-depth racks.

Impact indicator

Impact to the CONTOUR causes a temporary indentation on its surface. This indentation signifies that the rack protector and rack upright have been hit and that the CONTOUR should be removed to inspect for rack damage. The CONTOUR will pop back to its original shape.

frame and
corner
uprights**

Sizes to fit

3", 3.25", 3.5", 4" and 4.75" rack uprights and ends. Designed to fit over beam connector hardware.

All sizes of the CONTOUR are 18" tall.
