

Rubber Parking Blocks

Park-It Rubber Parking Blocks indicate the proper vehicle position when parking. For use inside or outside your facility. They avoid damage to building walls, sidewalks, curbs and planted areas.

Constructed from 100% recycled rubber, they have molded reflective stripes for higher visibility in low light. Rubber Parking Blocks are a durable, lightweight alternative to traditional concrete stops. Installation is fast and easy with rebar spikes for asphalt surfaces or lag bolts and shields for concrete surfaces. Also, the install can be completed by one person without heavy equipment.

Choose from Black/Yellow, Black/White or Handicap Blue/White.

- Perfect for retail or commercial parking lots and parking garages
- Chip or corrode resistant to summer or winter elements and chemicals
- Flexible to accommodate uneven surfaces
- Environmentally friendly
- Temporary or permanent installation

Home Park-It

Protect valuables and prevent damage in and around your residential garage or parking area. At only 22", the Home Park-It is perfect for your residence. Simply place and park! No installation hardware necessary.
