# HEAD PROTECTION

## The Brain Game! Use Proper Head Protection

We are in our mission to make safety affordable to everyone. Our Head Protection ranges are designed to provide maximum protection from impact and penetration hazards caused by falling objects. Consult with our PPE Experts to select the right Head Protection for based on your workplace & hazard level.

There are two categories of impact protection for hard hats: Type I and Type II. Type I hard hats are intended to reduce the force of impact resulting from a blow only to the top of the head. Type II hard hats are intended to reduce the force of lateral impact resulting from a blow that is received off-center, from the side, or to the top of the head.

In addition, there are three classifications of hard hats: G, E and C. Class G (general) hard hats offer protection against electrical hazards of up to 2,200 volts (V). Class E (electrical) hard hats provide the greatest protection for electricians, linemen and wiremen, insulating against high-voltage shock, burns and electricity up to 20,000V. Class C (conductive) hard hats are not designed to be used in electrical work. Another form of head protection is a bump hat, which provides protection in low clearance areas. Unfortunately, this type of PPE does not offer protection from falling objects or electrical hazards.

Inserts that attenuate sound to suit specific ambient noise levels

## Noise damping

It is the difference between the intensity of the “noise” to which the operator is exposed and that actually transmitted to the ear. The damping level is expressed in the following manners:

**HML:** this indicates the damping level based on the frequency of the noise: High (H), Medium (M), Low (L) frequency. The damping values are expressed through a number preceded by a letter of the frequency to which it refers.

**SNR: (Simplified Noise Reduction):** it expresses the damping level of the protector through a single value

## PPE and daily exposure level

According to art. 193 D.Lgs 81/08, if the operator is exposed daily to:

- › 80 dBA the employer provides the workers with hearing PPE
- › 85 dBA the employer demands the workers to use hearing PPE

The employer takes into account the attenuation provided by the personal protection devices worn by workers to assess the efficiency of PPE and compliance with maximum values of noise exposure [87 dB(A)] Workers exposed to levels exceeding 80 dB (A) receive proper training and practical instruction (art. 195).

Type	Protection
FFP1	Suitable for use in the presence of: iron, rust, concrete, stone, filling materials. Restrictions: not suitable for filtering cancerogenous particles or radio-active substances, microorganisms (virus, bacteria, fungi and spore) and enzymes.
FFP2	Suitable for use in the presence of: wood, steel, cement, paint, spray paint and anti-rust, fibreglass and mineral fiber, welding fumes, zinc, pesticides in water solution, flour, mould and spore, bacteria, soot. Restrictions: not suitable for filtering particles of radioactive substances, virus and enzymes.
FFP3	Suitable for use in the presence of stainless steel, anti-vegetative paint, asbestos, tuberculosis bacteria.

## Anti-Gas Filters

### Classes of anti-gas filters

The filters are classified according to the absorption capacity, in other words the amount contaminant that the filter can absorb:

Type	Protection	Class	1	2	3
		Capacity	small	medium	large
A	Organic gas and vapours with boiling point above 65°C				
B	In organic gas and vapours				
E	Sulfur dioxide and other acid gas and vapours				
K	Ammonia and by-products				
AX	Organic gas and vapours with boiling point lower or equal to 65°C				
SX	Gas and vapours specifically indicated from manufacturer				
HgP3	Mercury vapours				
NOP3	Nitrogenated fumes				
P	Dust

Class 1 Reflectance of minor bands

**EN 1150** Sets the standard that high visibility clothing needs to meet to ensure that the wearer is clearly visible to motorists against the background in ALL weather and lighting conditions (bright daylight as well as rain, mist, dusk and night-time). To achieve this, clothing must have a combination of fluorescent material for daytime visibility and reflective material for night-time and low light conditions.

## EN 342 Protection against cold

Suits and clothing for body protection against cold environments at temperatures below - 5 °C

- A Effective thermal insulation \* (B, C or R) \*\*
- B Resulting effective thermal insulation \* (B, C or R) \*\* (Optional)
- C Air permeability (from 1 to 3)
- D Resistance to water penetration (from 1 to 2) (Optional)
- X Indicates that the garment has not been tested

\* measured in m2 x K / W

\*\* type of underwear used in the test

## EN 420 PROTECTIVE GLOVES - GENERAL REQUIREMENTS

Gloves “just for minor risks”

Protection for:

- › Mechanical actions, the effects of which are superficial (gardening gloves etc.);
- › Bland cleaning materials with easily reversible effects (gloves that protect against diluted detergents etc.);
- › Risks encountered when handling hot components that do not expose the user to a higher temperature than 50 °C or to hazardous impact;
- › Atmospheric agents that are neither exceptional nor extreme (seasonal clothing);
- › Minor impact and vibrations that do not involve vital parts of the body, the effects of which cannot cause irreversible injuries.

## EN 388 MECHANICAL RISKS

abcd

Protection against physical and mechanical aggression caused by abrasion, blade cutting, tearing, puncture.

**a** Resistance to abrasion (level from 0 to 4)

**b** Resistance to blade cutting (level from 0 to 5)

**c** Resistance to tear (level from 0 to 4)

**d** Resistance to puncture (level from 0 to 4)

O: glove failed specific test

X: glove was not tested

## EN 1082-1 GLOVES AND SLEEVES THAT PROTECT AGAINST BLADE CUTTING

They offer a certain protection against stabbing. They are used in particular in slaughterhouses where hand knives are used and in any place where meat, fish and shellfish are processed, in catering and in manual meat boning premises. They also offer suitable protection to those who use hand knives in the plastic, leather, textile and paper industries and in laying floors and similar activities.
