

Case Study #4: Recycling Roofing Membrane Promotes Corporate Sustainability

Customer: Roofers for Meijer Grocery Stores
Job Locations: MI, OH, KY, IN
Job Size: (4) roofs totaling 959,000 sf
Yield: 96,000 lbs of EPDM and TPO Membrane
Timeframe: Spring 2020

The Meijer Company operates 204 grocery stores throughout the Midwest. As part of their commitment to sustainable operations, Meijer specifies that membranes removed during re-roofing operations should be recycled. NFR has been the go-to company for roofers providing services to Meijer for many years. In the spring of 2020, NFR provided recycling services at four (4) Meijer projects. Upon completion, NFR issued certificates of recycling to Meijer giving their sustainability manager something to crow about!

Nationwide Foam Recycling helps re-roofing contractors save money and reach their sustainability goals by recycling ISO, XPS and EPS Foam Insulation Board as well as EPDM, PVC and TPO roofing membrane.

Unlike traditional recyclers that focus on straightforward waste streams like corrugated cardboard and metal, we specialize in recycling difficult wastes. If you have a re-roofing project that will produce a sizable volume of foam insulation or membrane waste give us a call. We'll implement a collection, transportation, processing and recycling program that will save you time, labor and money.

**Nationwide Foam
Recycling collects and
recycles ISO, XPS and
EPS Foam Insulation
Board as well as EPDM,
PVC and TPO Roofing
Membrane**

**Our recycling programs
save re-roofing
contractors money and
help them win bids**

**Re-roofing contractors
that recycle with NFR
help their building
owners exceed their
LEED and sustainability
goals**

**We've successfully
recycled re-roofing
wastes since 1992!**
