

Case Study #3: Recycling Off-Spec XPS Foam Insulation

Customer: Foam Insulation Board Manufacturer

Timeframe: 2019-2020

NFR is providing recycling services to a manufacturer of XPS foam insulation in support of their shift to a more environmentally benign blowing agent. NFR has picked up and reclaimed over 150 truckloads of foam insulation to date. NFR's recycling services have saved the manufacturer thousands of dollars per month in avoided disposal costs.

Nationwide Foam Recycling helps re-roofing contractors save money and reach their sustainability goals by recycling ISO, XPS and EPS Foam Insulation Board as well as EPDM, PVC and TPO roofing membrane.

Unlike traditional recyclers that focus on straightforward waste streams like corrugated cardboard and metal, we specialize in recycling difficult wastes. If you have a re-roofing project that will produce a sizable volume of foam insulation or membrane waste give us a call. We'll implement a collection, transportation, processing and recycling program that will save you time, labor and money.

Nationwide Foam Recycling collects and recycles ISO, XPS and EPS Foam Insulation Board as well as EPDM, PVC and TPO Roofing Membrane

Our recycling programs save re-roofing contractors money and help them win bids

Re-roofing contractors that recycle with NFR help their building owners exceed their LEED and sustainability goals

We've successfully recycled re-roofing wastes since 1992!
