

Transabdominal and Transvaginal Pelvic Study Report

January 13, 2020

MRN: 13774
DOB: 1970-03-14 Age: 49
Gender: F
Study Time: 04:39 PM
Reading Group: David Nyberg, MD
Referring Group: Clinton Leonard, MD
Sonographer: CD, RDMS

Study Quality: Good

Indications: IRREG BLEEDING

Procedure Code: 76857 Ultrasound pelvic limited
76830 Transvaginal ultrasound, non OB

First day of LMP: 2019-12-23

	Sag	AP	Trans	Volume
	cm	cm	cm	ml
Uterus	8.31	4.91	6.69	142.93
Uterine fibroid 1:	2.22	1.8	2.59	
Uterine fibroid 2:	1.89	1.74	1.73	
Right ovary:	1.78	1.24	1.56	1.8
Left ovary:	4.31	2.16	3.94	19.21

Endometrium thickness: 7.79 mm

Findings:

A transabdominal and transvaginal exam was performed.
The uterus is retroverted. The uterus is 8.31 x 4.91 x 6.69 cm, with volume of 142.93 ml.

fibroids

ANTERIOR FUNDAL LT 2.2x1.8x2.6cm

?? ANTERIOR LUS RT 1.9x1.7x1.7cm

The endometrium measures 7.79 mm.

There is a 2.22 x 1.8 x 2.59 cm uterine fibroid. There is a 1.89 x 1.74 x 1.73 cm uterine fibroid.

The right ovary measures 1.78 x 1.24 x 1.56 cm, volume 1.8 ml.

The left ovary measures 4.31 x 2.16 x 3.94 cm, volume 19.21 ml.
3.71 x 1.67 x 2.99 cm cyst noted on the left ovary.

Transvaginal ultrasound was required to evaluate the endometrium and ovaries.

Conclusions:

David Nyberg, MD
Electronically Signed on Studycast

* Borderline enlarged retroverted uterus, which is heterogeneous in echotexture. A single discrete fibroid is noted, 2.6 cm- it is fundal and essentially transmural in location. A second questionable but not well defined are in the lower right uterus measures 1.9 cm. The diffusely heterogeneous myometrium also suggests possible co existing adenomyosis.

* Normal thickness of the endometrium, not well defined.

* Small inactive appearance of the right ovary.

* Mildly enlarged left ovary with a cyst measuring up to 3.7 cm. It is predominantly simple, but shows a thin internal septation or 'cyst within a cyst' appearance.
