

COMMERCIAL SILICON

growershouse

Commercial Silicon by Ventana Plant Science

Purified Silica Nano Particles (SNPs) formulated for direct uptake & metabolic unitization.

VPS Commercial Silicon is absorbed as colloidal particles designed to be a specific size to facilitate plant uptake. Silicon is absorbed and incorporated into cell walls which then plays an active role in many stress and plant growth metabolic processes.

VPS Silicon prevents emitter - clogging precipitates unlike potassium silicates.

Works in all fertigation systems. Zero additives. Fully Stabilized.
