

Aviation Management Group, Inc.

AMG Aviation provides training and support in several key areas including Air Traffic Control, Aircraft Dispatcher, Aircraft Maintenance, and Aviation English.

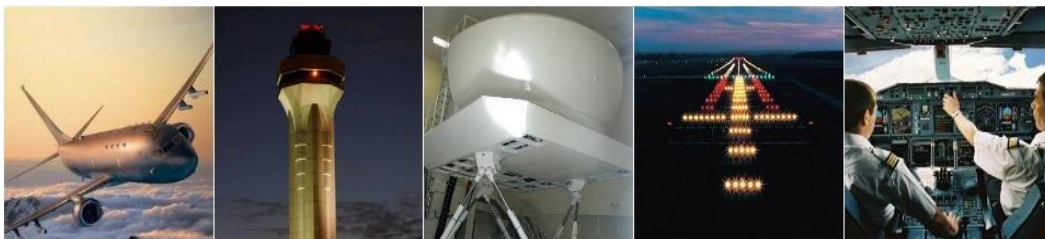

AMG Aviation has been involved in the aviation training industry since 1994 and has trained over 300 flight crews from countries in Central and Eastern Europe as well as South and Central America, the Middle East and Africa. AMG was contracted by Pan Am International Flight Academy to promote its training services throughout the world and manage those services internationally.

Aircraft Simulation Training

AMG has over 25 years of practical training experience in full flight simulation training on multiple aircraft platforms including those produced by Boeing, Airbus, Cessna, ATR, McDonald Douglas, Embraer, Bombardier, and others. AMG can provide certified pilot instructors on all major aircraft types as required and maintains an inventory of over 30 qualified instructors. AMG has developed multiple business units in the aviation training industry and provides expertise in the procurement, management and support of both fixed base and full flight simulation equipment on a global basis.

Air Traffic Control and Aircraft Dispatcher Training

AMG has been involved in the training of air traffic controllers and aircraft dispatchers since 2006 and specializes in the training of foreign controllers and dispatchers in America under both EASA and FAA procedures and recommended practices including all official certifications.

Training Center Design and Facilities Management

AMG works with well-known architects and engineers throughout the world to create an economical and efficient training center facility that houses the most advanced aircraft simulation equipment and combines that with ergonomic and comfortable classrooms, practical engineering sections and business office units that include all necessary and state-of-the-art electrical and HVAC equipment that is required for the latest simulation equipment. In addition to the facility design, AMG provides expertise in facility management including the hiring of specialized engineers and instructors to operate the facility in a profitable manner. In many cases, the facility is also designed to provide Air Traffic Control, Aircraft Dispatcher and Maintenance Training capabilities including engine teardown and testing options.

AMG's consulting services include Proavia, LLC and other divisions that are intended to provide exceptional customer support.

AMG and its Proavia Division is designed to provide their customers with "one stop shop" service including the following:

- Aircraft Acquisitions including Aircraft charter or ACMI
- Aircraft Finance – Lease or Purchase
- Aircraft Engine Maintenance & Repair
- Air Crew Leasing including Long Term or Ferry Flight
- Aircraft component sales
- Air Freight / Cargo and Logistics
- Airline asset management
- Aircraft MRO Services
- Aviation Training and Facilities Management Services
- Aircraft interior design and completions
- VIP Services including security protection and emergency procedures
