

Weight Management Therapy Program

Olympia's weight management protocol is a physician-supervised program designed to help any individual reach his or her specific weight loss goals. The Olympia weight management protocol uses a combination of Naltrexone, Sermorelin, Lipo-Trim SL and low calorie intake to achieve optimum weight loss results. The protocol may also boost metabolism and help patients lose large amounts of fat, all without feeling hungry..

NALTREXONE/ 30 DAY SUPPLY

Nightly Oral LDN

Enhanced fat burning and weightloss

Helps reduce feelings of hunger and curbs appetite

Mental clarity

SERMORELIN/30 DAY

Nightly Sub Q Injection

Faster recovery from working out

Stimulates the bodies own growth hormone levels

Helps restore the bodies natural sleep cycle

LIPO-TRIM SL/30 DAY SUPPLY

Daily Sublingual Oral Spray

Assists in reduction of food cravings

May increase metabolism and improve energy levels

Aids in immune support

Weight Management Therapy Program

Basics:

OWMP is designed to use Low Dose Naltrexone (LDN) in addition to Sermorelin and Lipo-Trim SL, for best results. All medications work slightly differently to help the body raise growth hormone levels which supports several health benefits, including weight loss.

The OWMP, using suggested medications and dosages, can only be done under the supervision of a physician.

Kit Components:

Naltrexone Oral Capsules
*Monthly Dosage: **Month 1** = 1.5mg, **Month 2** = 3mg, **Month 3+** = 4.5mg*
Sermorelin Injectable w/ Bacteriostatic Water
Lipo-Trim Oral Sublingual Spray

Naltrexone (Oral, nightly)

Naltrexone in low doses, is referred to as Low Dose Naltrexone, or LDN.

LDN recommended dosage for weight loss is 1.5mg to 4.5mg nightly. Possible benefits of LDN include:

- May help decrease insulin levels which can improve growth hormone levels in patients. Growth hormone helps the body burn fat and maintain lean muscle mass.
- May help normalize appetite and reduce hunger.
- In some studies has shown to reduce general inflammation throughout the body. Reducing inflammation may make weight loss easier in certain patients.
- Naltrexone may help to "normalize" this mismatch between calories burned and appetite, especially in patients with hormonal imbalances.

Sermorelin (Sub Q injection, nightly)

Benefits of Sermorelin Acetate (GHRH) Therapy: (300mcg nightly):

- Sermorelin may stimulate the pituitary to produce more of your own body's growth hormone. Growth hormone production drops naturally as we age.
- Increased growth hormone can increase development of lean body mass through the development of new muscle cells.
- Higher growth hormone levels may reduce body fat through lipolysis.

Weight Management Therapy Program

Lipo-Trim SL (Sublingual Oral Spray, 1x daily)

A concentrated sublingual oral spray which includes a combination of amino acids and B vitamins. Recommended dosage is 6 sprays or 1ml daily.

- Can help the body convert fat into energy
- May help reduce cravings
- Can help support immune system

Supplemental Medications:

When following a low-calorie diet, there are also other variables to consider. For example, immune system and energy may both be in short supply when restricting calories. Both immune response and energy enhancers may be options to fulfill deficiencies in these areas. Below are options to consider. Please discuss which option may be most suitable for you with your medical provider.

MICC (1ml IM injection, weekly):

MICC is an acronym for the compounds: L-Methionine, Inositol, Choline and Cyanocobalamin. These are lipotropic agents which help with the breakdown of fat during metabolism in the body. Often referred to as “fat burning” injections, these components, especially inositol and choline, have been found to improve mental function and feelings of depression.

Lipo Mino Mix (1ml IM injection, weekly):

Lipo-Mino Mix starts with a special lipotropics fat burning combination of methionine, inositol, choline, carnitine, B1, B2, B6 and B12. Each of these ingredients can help the body turn fat into energy.

Accountability:

Accountability is as much as an important part of a diet, as the diet itself! Each office should have someone who can meet with patients each week for administering the IM injections and weigh ins. Keeping the patients accountable and motivated in their weight loss journey is paramount to the success of the program.
