About Chisun Projects

Chisun Projects is an integrated marine and offshore group offering technical, engineering and consultancy solutions to support our clients in the marine, shipping and energy sectors. With our diverse experience and customised approach, we craft well thought solutions for our customers.

Our key business activities are :

- *Project Management*
- *Inspection and Engineering Consultancy*
 - ❖ *Remote Inspection Techniques - UAVs and ROVs*
 - ❖ *Rope Access & NDT*
 - ❖ *Subsea IRM*
 - ❖ *Design & Engineering - Vessel constructions; BWTS, EGSC, etc*
 - ❖ *3D Laser Scanning*
- *Technical Services*
 - ❖ *Steel Structures and Piping System Fabrications*
 - ❖ *Mechanical and Hydraulic Systems*
- *Procurement Solutions*
 - ❖ *Project Procurement*
 - ❖ *Inventory Management*

Project Management

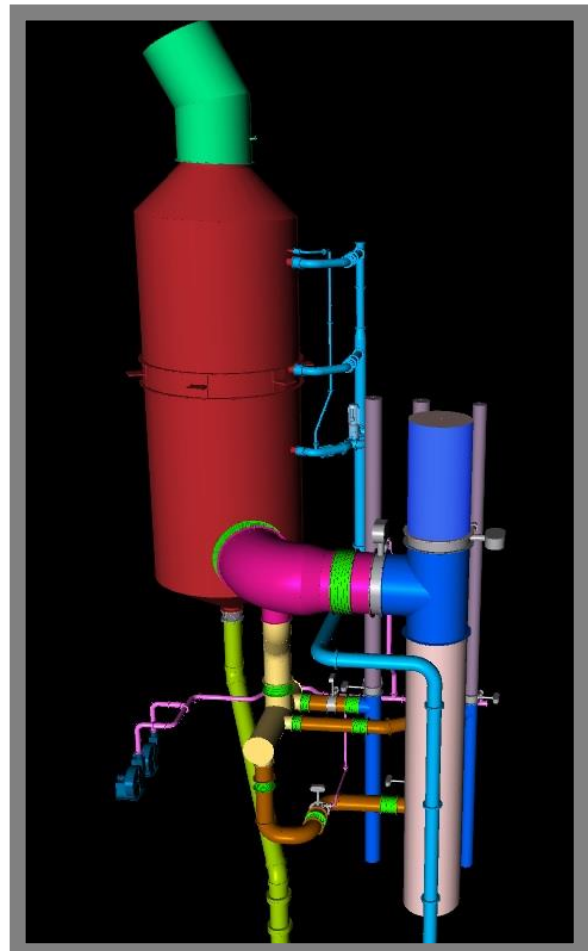

Sound project management is the key to every successful project. The ability to foresee problems enables the team to take necessary actions to negate project hiccups. With a team of experienced and qualified managers and staff, Chisun Projects are equipped to tackle project of various nature professionally and competently, driving each project to its intended destination – success.

- Marine Vessel and Structure Construction
- Turnkey Equipment Module Construction
- Turnkey Project Management and Execution

Inspection and Engineering Consultancy

All individual challenges are unique and require vastly different approaches to ensure the challenge is adequately met. Chisun Projects design solutions specific to each situation. Our methodology is simple and systematic, breaking down each condition into the most basic form.

- Inspections and Consultations
- Engineering Feasibility Study, Review and Modifications
- Risk Evaluation and Management
- Safety System Study and Recommendations

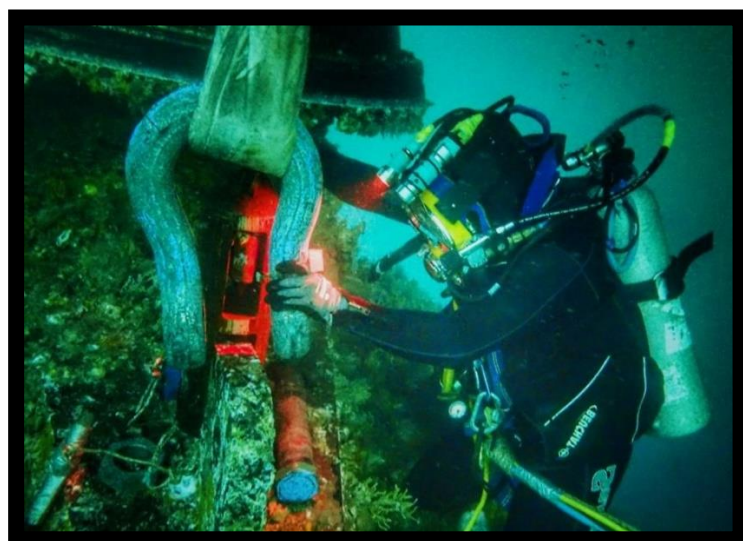

Fabrication and Construction

Steel structures and piping systems are the basis of all plants. Whether it is a highly-complex equipment modules or a network of piping systems, Chisun Projects are able to work with you on the details and specifications of the project.

- Equipment Skid Fabrication, Assembly and Installation
- Structures and component Fabrication.
- Piping System Fabrication and Installation

3D Laser Scanning

The application of 3D laser scanning greatly improves the collection of high quality data by creating 3D modelling from point clouds. Such applications help incorporate new systems into existing assets.

Subsea Services

We provide experience and qualified dive services to carry out inspection, maintenance and repair for vessels and coastal assets.

- Inspections – photo and video
- Maintenance : polishing and Hull Cleaning; intake and discharge plugging/blanking, transducer change-out
- Repairs : Hull damages, cofferdam solutions and internal repairs

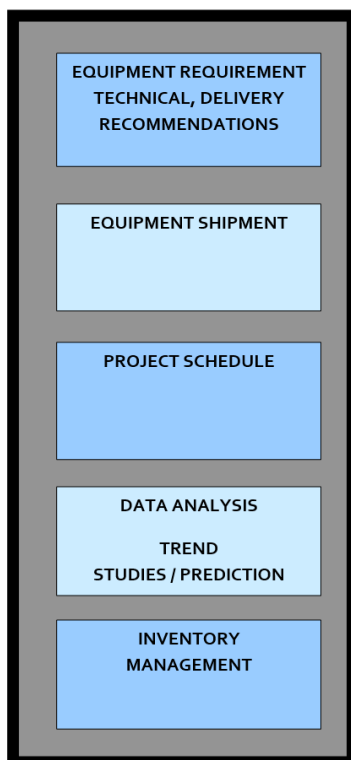

Remote Inspection Techniques - UAVs

Removing the risk of personnel working at height is a drive for all industrial activities. With the application of Unmanned Aerial Vehicles (UAVs), we offer real-time inspection services which not only save time and costs to erect scaffolds.

Remote Inspection Techniques - ROVs

For general subsea inspection of marine assets, ROVs eliminate the inherent risks of diving operations. ROVs provide a quick and safe visual inspections of submerged areas of vessels and coastal structures such as jetties and sea-water intakes.

Procurement Solutions

Procurement is a huge and important aspect of every successful business and project. It requires immense experiences and sound knowledge to be able to ensure that supplies integrates seamlessly with your operations and projects. Chisun Projects provides customized solutions to your various procurement needs. Based on sound data analysis and tremendous logistics networks, we are capable to tailor every variation to the perfect solution.

- Project procurement management solutions
 - ❖ Equipment technical evaluation and recommendations
 - ❖ Project Supply-Chain Management
 - ❖ Inventory Management
