What if...

...your home was able
to make intelligent
decisions without you
having to do anything?

Technology rides high in our workplaces, our pockets, our wrists, and our social lives, however our homes have been left completely behind. We still must adjust the heating settings when we get home and deal with the hassle of giving out long complicated Wi-Fi passwords to our friends.

Until now, expensive systems were needed to make our homes intelligent. This has now been simplified putting smart technology in your home without significant cost is attainable.

Transform your current home with an AutoOpti hub. Automated lighting that changes colour and hues, lights that turn on and off whenever you want without lifting a finger. All made possible with AutoOpti systems. It's not just limited to lighting; automate your heating, kitchen appliances, your music, your Wi-Fi and much more.

AutoOpti's aim is to help you discover your home's potential creating the perfect smart home for you.

7:00AM

WAKING UP

The heating turned on an hour before you wake up.

The light switches on low, and slowly gets brighter.

Light music starts after twenty minutes.

Your child's bedroom wakes up routine starts 15 minutes later.

Wake up feeling refreshed.

7:30AM

GETTING READY

The bathroom lighting turns on when you open the door. Your electric underfloor heating has already started warming up at your wake-up time, ensuring your floor is the perfect temperature for you to step in.

It is nice and bright.

8:00AM

AUTOMATED APPLIANCES

The washing machine and dishwasher have finished their cycles.

The kettle is boiled and coffee is brewed.

EASY COMMUTING

Bulbs in the hall change colour to tell you if your route to work is delayed or if now is a good time to leave. Later, it does the same for the school run.

GOING ON HOLIDAY

You have packed your bags and told the house you are going.

Heating lowers, lights turn on at night to show the house looks occupied, your phone tells you if something happens.

YOUR PROCESS

Every home is unique, and everyone uses their home differently. The packages are in three stages to make sure your home is automated and optimised to your specifications.

STAGE 1 - THE INITIAL DESIGN Your home and your design

proposals are assessed, you are presented with all the options available and you select what you want with the help of your designer and ourselves.

Optimize your home and life and strike the balance between cost and performance.

STAGE 2 - BUILDING UP THE DETAIL You and your designer select

the products with our guidance, specify what goes where, and which routines. Customize your home how you want, and discover your home's potential. This is about creating a smart home that works for you.

STAGE 3 - PROGRAMMING Once the building works have started, you

do nothing. We purchase the hardware and programme all the parts ready for a smooth install.

STAGE 4 - INSTALL The bulbs are delivered to your contractor for install.

We visit to setup the hub which attaches to your router.

STAGE 5 - AFTER CARE Whilst you settle in, we are on hand to tweak

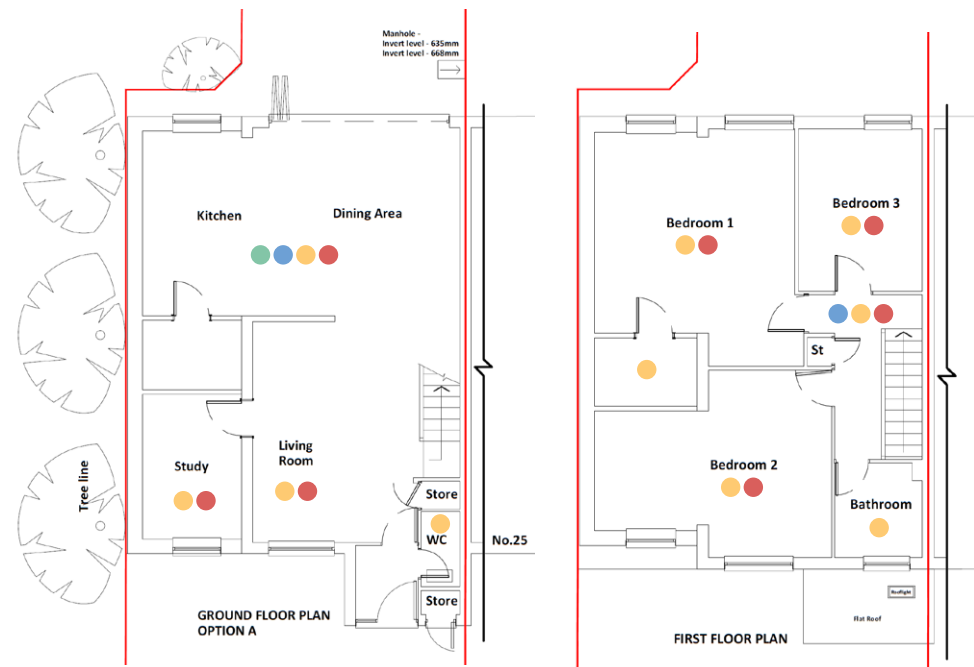

settings and make the home fully optimised.
