

MINECRAFT CHONK

Either print pdf attached to size (A2) or cut from coloured card according to measurements (note imperial is as close as I could get, converting from metric).

The tail is then laminated and cut to shape.

I stuck the pig to foamcore board (mounting board) so that the tail could be pinned using a standard pushpin. We then used small round stickers with the children's initials to mark their "spot" and re-used the same tail.

I also used clear Con-Tact to "lamine" the pig for durability.
