The Bovine Leukosis Virus (BLV) enzyme-linked immunosorbent assay (ELISA) detects antibodies specific to BLV antigen. The assay may be performed on individual samples of Bovine milk or serum, or on bulk milk. Results are determined by measuring optical density (OD) for each sample at 450 nm minus the average OD of the negative control, the result is listed as the test value.

Individual Milk:

Test Values < 0.1 are classified as Negative

Test Values 0.1 to 0.3 are classified as Suspect

Test Values > 0.3 are classified as Positive

Serum:

Test Values < 0.5 are classified as Negative

Test Values 0.5 to 1.0 are classified as Suspect

Test Values > 1.0 are classified as Positive

Bulk Milk:

Test Values < 0.1 are classified as Negative

Test Values ≥ 0.1 are classified as Positive
