An Eco-friendly Cleaning, Sanitizing and Disinfecting Solution

**A Service-Disabled Veteran-
Owned Small Business**

We Do It Right

EcoClean Sanitize and Disinfect process is the most efficient, effective and economical sanitizing solution without harming people, animals or damaging equipment, fixtures or merchandise. We combine, fogging (spaces) and sanitizing (equipment) in the process.

Each Job is Carefully Planned

Maintaining a safe work environment for employees and customer experiences is a commitment and a priority. We work close with each business owner and/or facility manager on the expected outcome of our service.

"We use the SystemSure Plus, ATP (adenosine triphosphate) Bio-Contamination Testing Meter for monitoring hygienic conditions after each job."
Quality Assurance Policy

We sanitize and disinfect vehicle fleets (5 units min) which include material handling, construction & stationary equipment, . Even though the steering wheel and door handles are where most human contact is found, also consider all the parts that are rarely, if ever, cleaned. Sanitizing with a disinfectant that meets leading health authority requirements, with particular attention to more than 20-plus high-touch points.

Attention to Detail

It is essential to set the right micron size on our sanitizer machines to kill coronavirus. Too small microns and the disinfectant will take too long to settle on surfaces and too large and you will not kill any virus particles in the air.
