

SURVEY CROSS-TABULATIONS

British Columbia provincial survey | October 2026

Unweighted base: 856 | Base: 800.0 (WT weighted)

Combined provincial vote and union-household banners

How to read the tables

Base and Unweighted base. Base is the sum of WT weights, while Unweighted base is the actual number of respondents in that question and column.

Column percentages. Each response is expressed as a percentage of that column's valid question base. Top/bottom-box NET rows are shown for Q2; these overlap their component categories.

Suppression. Banner columns are omitted whenever either their question-specific Base or Unweighted base is below 40. Suppressed categories remain part of the Total column.

Significance tests. A percentage followed by [B] is significantly higher than column B. Two-sided pooled z-tests with Kish effective base sizes; Bonferroni adjustment across the displayed banner comparisons within each response row; 95% family-wise confidence.

Statistical caution. Sampling/recruitment documentation was not supplied. These are approximate exploratory comparisons, not design-based significance tests from a probability sample. Tests are withheld if any effective expected success/failure count is below five.

BANNER: UNION HOUSEHOLD

A = Union household (private or public); B = No union household. "Don't know" remains in Total but is not shown separately.
