

Full Electric Servo Drive Vertical Injection Molding Machine (Introduction of horizontal injection type)

**The JT-AD vertical injection molding machines are available also
in horizontal injection (parting injection) type.**

Features:

- The machine height smaller than that of the vertical injection type allows a lower building construction to house machines.
- The small machine height facilitates material feeding and machine maintenance.
- Since the mold is mounted upright, the insert metal is stable. This facilitates insert molding.
- We recommend our machine as an option that matches versatile production modes and product types.

Full electric servo drive vertical injection molding machine
JT AD SERIES

Model: JT20RAD-30H (incl. options)

A wide selection of modules that match diversified product types and production modes

		Injection unit							
		15H	30H	60H	110H	180H	300H	460H	890H
Rotary type	Clamping unit								
	JT20RAD								
	JT40RAD								
	JT70RAD								
	JT100RAD								
	JT150RAD								
Single acting	JT220RAD								
	JT40AD								
	JT70AD								

NOTE:

1. The circles in the table are a standard combination. Contact your nearby JSW Sales Office if you desire other combinations.
2. Regarding detailed machine specifications, refer to the separate Specification Table.
