Red Arrow Industries' Line Card

RED ARROW INDUSTRIES
BREAK THROUGH 

At **Red Arrow Industries** our mission is to drive down your operating costs. We accomplish this by representing a lineup of plastic processing machinery and equipment that is unmatched in reliability and performance. Our network of original equipment manufacturers (OEMs) are leaders in their respective fields because they provide solutions that generate higher rates of productivity. Leveraging the expertise of our determined OEMs creates space for you to produce higher levels of customer satisfaction and profit. Red Arrow Industries is ready to help you Break Through to the next level of manufacturing excellence from their partnerships and expertise.

Bare Naked Robots LLC
Industrial Robots

Bare Naked Robots is a distributor of Hyundai Industrial Robots. HD Hyundai Robotics, pioneers of innovation in factory automation through cutting-edge robotics technology. By leveraging diverse manufacturing innovations and automation solutions based on robotics, we maximize productivity and reduce costs with stable operational management support. We are committed to driving the future of industrial innovation with our robotics technology.

These Manufacturing Robots, with payloads from 6 to 220 kg, are available from and fully supported in the United States.

RapidPurge®
Thermoplastic Purging Compound

RapidPurge has been the top performing purging compound for over 35 years and our products defeat the most demanding hostile thermoplastic processing challenges of carbon buildup and time consuming and costly color changeovers.

From heavy duty chemical purging to quick change mechanical purging.

Santa Fe Machine Works is a world leader for new & rebuilt Injection & Extrusion Screws, Barrels & Valves. A Family Business since 1923, we excel in offering a custom-tailored screw, barrel & valve combos allowing our Plastic Processors Throughput goals to be met. We can handle any size, material, or application for any manufacturer. Our expertise is working with our customers every step of the way, from inception to inspection of custom parts and components, just as our Great-Grandfather did over 95 years ago!

We are the single source solution for new and used screws, barrels, non-return valves and custom components for all plastic processes

VISMEC
LEADING INNOVATION

Vismec is more than simply the sum of our competences. We are born to deliver top-notch machineries that offer our clients the best performances on the market. We project, develop, and realize well-finished solutions that complies to the highest quality and efficiency standards. International experience, qualified training and continuous research are at the basis of our success. We are pioneers in design and technology, we believe in the power of our ideas, which we cultivate with dedication.

Material Drying and Conditioning. **The only dryer with VFDs for Process and Regeneration circuits.** No one is better.

Hamilton Plastics Systems develops, manufactures, distributes, and supports a wide range of plastic material conveying, blending and conditioning machinery used in the plastic processing industry. Our equipment includes Vacuum, pneumatic, and mechanical material conveying, volumetric and gravimetric blending, hot air and dehumidifying material drying, water and oil heating and cooling machinery, granulation and scrap recovery systems, silos for outside and inside material storage, product conveyors and transfer systems.

Material Loaders, bulk handling systems, silos, day and portable bins.

The Movacolor dosing technique is based on the in-line dosing of masterbatch, powder, regrind or liquid colorants into virgin material. Movacolor systems meet the need for high volume, quality and reliability in the dosing of masterbatch, powder, regrind and liquids for producers of PET preforms toys, household goods, automotive components, packaging, medical devices, profiles, pipes, cables, sheets, film and many other products.

In Line Dosing and Blending of additives and regrind directly into pellet stream.

For over 40 years, TSM supplying blending and control systems that enable companies to achieve the level of precision that their production processes demand, operating within a spirit of trust, compliance and fairness that has become our hallmark. Our blueprint for success is based on three core planks: Innovation, People and Experience – each of them feeding into a single vision of TSM being the world-leader in gravimetric blending, controls and material management.

Gravimetric Blending (**patented mixing chamber**) with four to six components and up to 11,000 lbs/hr

S.i.S.E.

S.i.S.e Temperature Controllers use high-performance Permanent Self Tuning software designed and developed by SISE, which continuously recalculates the best settings for each zone, instantly responding to any changes in process parameters. With its line of Hot Runner Temperature Controllers offering from 1 to 336 zones, SISE provides solutions suited to any mold size.

Hot Runner Temperature Controllers. 1 to 336 zones

JSW
JAPAN STEEL WORKS AMERICA, Inc.

Leading the growth and advancement of technology and innovation in plastics machinery for over 50 years, **JSW provides a full line of all-electric injection molding machines**, ranging from 30-3000 metric tonnes and offers ease of operation, safety, and environment-friendly improvements such as energy, and space-saving features.

All Electric High Performace Injection molding machines.

ABIMAN
engineering

Abiman Engineering is the best-in-class engineering solution providers based on its state-of-art Multi-tasking Robots in plastic injection molding industry. We are striving to meet customer expectations by holistic and seamless understanding and knowhow of plastic injection molding process. We provide the most optimum engineering solution covering all processes from first to last by value chain and process analysis.

Top and Side Entry robots and Sprue Pickers and Factory Automation

MB
Conveyors

It is the mission of **MB Conveyor** to provide all the solutions required in a process line where product is collected from a production unit and conveyed until it is finally stored in dedicated containers. Our work experience in the plastics, food production, packaging, medical and metal-working sectors, have helped us to develop a philosophy focused on the creation of made-to-measure solutions, machines and systems.

Conveying Solutions for any product handling need along the production line from the machine to the container

JSW Twin Screw Extruders are machines used to add value to plastic raw materials.

The **TEX-α R** and **TEX III** series machines are capable of continuously mixing, devolatilizing, and dehydrating multiple plastic materials and additives to achieve efficient production of high-performance plastic materials that meet market needs. We also have experience in plastics recycling applications.

Twin Screw Extruders for compounding fillers, masterbatch, polymer alloys, GF/CF, biomass, long fiber kneading, and Chemical and mechanical recycling

Thanks to the intelligent combination of the double feed ram system and single-shaft shredder the **PureLoop plastic recycling machine** is able to process a very broad spectrum of different material types and forms: from heavy, free-flowing and self-feeding plastics to lightweight and large-volume materials. The high-performance ISEC evo also makes light work of processing extremely tear-resistant input material such as fibers and strapping.

Versatile Recycling Plant for Industrial Scrap

Tria has specialized in the design and manufacturing of rotary knife granulators and grinding systems for over 57 years. Our main objective is the design and manufacturing of granulators, systems and solutions which meet the high efficiency and safety requirements that are industry specific. We strive for excellence in providing outstanding products and stand by our superior craftsmanship and dedication to quality.

Size Reduction Machines and material conveyance.

ICESonic ice blasting machines have a wide range of cleaning applications. They can be used to clean equipment without disassembly and without producing fire or electrical hazards. The EPA recommends dry ice blasting as an alternative to many types of solvent-based cleaning. ICESonic dry ice blasting machines can clean numerous objects with differing and complex geometries.

Dry ice blasting machines, block to pellet reformers and accessories for applications large and small.
