Sanitizing Booth

HUMAN

DISINFECTING / SANITIZING SYSTEM

We have designed and manufactured a Sanitizing Booth that will aid in the urgent fight against the pandemic by practicing, meeting and complying with hygiene and sanitation needs.

Our human disinfecting / sanitizing systems provide a hygienic and sterile working environment by releasing a mist of sanitizing spray over the participant. These systems are high-precision, sustainable, cost-effective, user-friendly and easy to maintain.

MOST EFFECTIVE FOR:

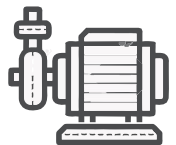

- Hospitals
- Grocery Stores
- Airports
- Workshops
- Industries
- Educational Institutes
- Hotels
- Restaurants
- Bus & Railway Stations
- Clinics
- Banks
- Government Institutes

HOW DOES IT WORK?

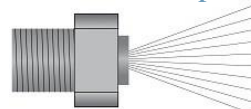

The disinfecting solution is contained in a tank of water that releases the mist through 20 nozzles when a participant walks through the booth, activating the sensors. This high-speed process only takes about 2 seconds per participant.

Disinfection
Solution Tank
(100 L)

Water Pump

Nozzle Spray (20)
